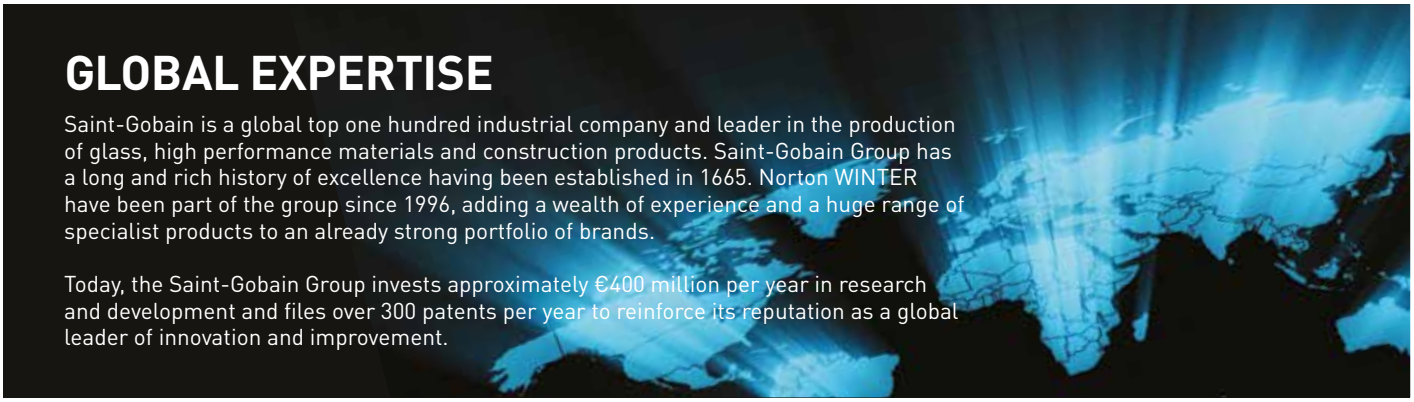
OUR CUSTOMER **CONNECTION**

As a Saint-Gobain brand, our customer-first philosophy, diverse product portfolio and strong global presence are our hallmarks and, we are an important part of a network that spans 45 countries with new locations being added every year. Saint-Gobain Abrasives employ over 16.000 people and is the only manufacturer to offer such a comprehensive range of abrasives and dressing tools in the industry.

For over 160 years, Norton WINTER has been one of the most well respected names in the industry and is synonymous with high quality diamond and cBN grinding products. Our unique combination of unbeatable quality, market leading expertise and outstanding service, are the foundations on which our success is built.



GLOBAL EXPERTISE

Saint-Gobain is a global top one hundred industrial company and leader in the production of glass, high performance materials and construction products. Saint-Gobain Group has a long and rich history of excellence having been established in 1665. Norton WINTER have been part of the group since 1996, adding a wealth of experience and a huge range of specialist products to an already strong portfolio of brands.

Today, the Saint-Gobain Group invests approximately €400 million per year in research and development and files over 300 patents per year to reinforce its reputation as a global leader of innovation and improvement.

THE NORTON WINTER BRAND PROMISES:

MARKET LEADING QUALITY

From day 1, Norton WINTER has stood for quality. From design to delivery, we exact the highest standards at every stage to ensure that we produce only the best products for our customers. Norton WINTER diamond tools are recognised for their exceptional performance and outstanding value for money.

INNOVATION

To this day, the Norton WINTER philosophy is closely connected to innovation and technical progress. As a pioneer, we have always been, and continue to be, actively invested in the future development of grinding technologies. Take advantage of our team of dedicated R&D scientists at Norton WINTER's purpose-built European Grinding Technology Centre.

CUSTOM-MADE SOLUTIONS

Over 75% of all Norton WINTER products are developed in close cooperation with our customers. Our product managers and application engineers relish the technological challenge of achieving the best grinding results for our customers. As such, we are happy to provide optimised grinding solutions to meet your specific requirements in a way that delivers the greatest benefit. At all times our aim is to generate cost savings, improved productivity, reduced down time, and better quality at every stage of your process.

OUTSTANDING SERVICE

At Norton WINTER we pride ourselves on offering a full service. From finding the perfect product to optimising your processes, we encourage all of our customers to take advantage of our technical expertise and years of industry experience. Our field sales force and customer service department are at your disposal.

OPERATIONAL EXCELLENCE

As a responsible manufacturer, Norton WINTER continually strives to minimise its negative impact on the environment and upholds industry leading standards of health and safety. Norton WINTER carries international certification to ISA 9001 (Quality Management), ISO 14001 (Environmental Management) and OHSAS 18001 (Health and Safety Management). Additionally, all rotating Norton WINTER tools bear the OSA safety seal (OSA: Organization for the Safety of Abrasives), providing our customers with the highest safety specification in a tool application.

A CORPORATE **PERSPECTIVE**

Saint-Gobain Abrasives are reshaping your world by bringing powerful, precise and user-friendly solutions that grind and finish all types of materials.

Our customers require only the smartest designs and highest performance products, that's why innovation and improvement are at the heart of everything we do. Material sciences and technological development are an obsession and the satisfaction of our customers is what drives us in the pursuit of perfections.

TRUST NORTON WINTER
ONE BRAND, ONE TECHNOLOGY LEADER

Norton Winter, the premium brand for diamond and cBN grinding products, is one of the most well established and respected brands in the market. With over 160 years' experience, Norton Winter offers a performance package designed to generate cost savings through increased productivity, less down time, and better quality.

NORTON
SAINT-GOBAIN
WINTER

YOUR SAFETY IS **OUR PRIORITY**

Your safety is our top priority and we understand that the nature of our customers' work presents inherent risks. To help minimise those risks, all Norton WINTER products are manufactured in accordance with the most rigorous European and International health, safety and environmental regulations.

THE ORGANISATION FOR THE SAFETY OF ABRASIVES

We are proud to carry the oSa trademark.
As a member of the oSa, we are positioned amongst the very best manufacturers with the highest levels of safety. Through a stringent monitoring and audit system year after year, we maintain our reputation as a reliably safe and responsible producer of quality abrasives. We conform to European and International standards, EN12413, EN13236 and EN13743 for bonded, diamond and coated products and ISO 9001, 14001 and OHSAS 18001 for our manufacturing sites. Where possible, always opt for products and suppliers who carry the oSa® trademark to ensure quality products of the highest safety level.

THE FEDERATION OF EUROPEAN PRODUCERS OF ABRASIVES

As a member of the FEPA association, we stay up-to-date with all technical, legal and scientific regulatory frameworks. Together with oSa, FEPA pursues the objective of supporting both currently attained safety standards and potential future developments.

WINTER

SNAPSHOTS OF A LONG **HISTORY**

In 1847 Ernst Winter established a family-owned company with a simple vision of developing the best ultra-hard crystal tools that money could buy. Today, we still adhere to that vision and throughout our history have gone on to develop a reputation as industry pioneers, trend-setters and technological leaders. We are Norton WINTER.

1847 Ernst Winter
Goldsmith and diamantaire founded his diamond tool workshop.

1872 WINTER in Hamburg
The company establishes its first building in Hamburg.

1960s WINTER in Space
Laser reflectors ground with WINTER diamond tools enable the most accurate astronomic and geographic measurements.

1983 Celebrities
Helmut Schmidt (Federal Republic of Germany's former Chancellor) visits WINTER and acts a "diamond maker".

2017 Norton WINTER
WINTER merges with abrasives giant Norton to form Norton WINTER.

ROUND TOOLS GENERAL INFORMATION

The product range for round tools is extensive. Different materials and tool geometries make various demands on the grinding tools used in manufacture.

Shorter grinding times, better suitability for automation and longer dressing intervals are required.
Specific grinding wheel characteristics such as edge stability and free-grinding behaviour have to be carefully balanced.

Information
Further information on applications and products can be found at
www.nortonabrasives.com

GENERAL INFORMATION

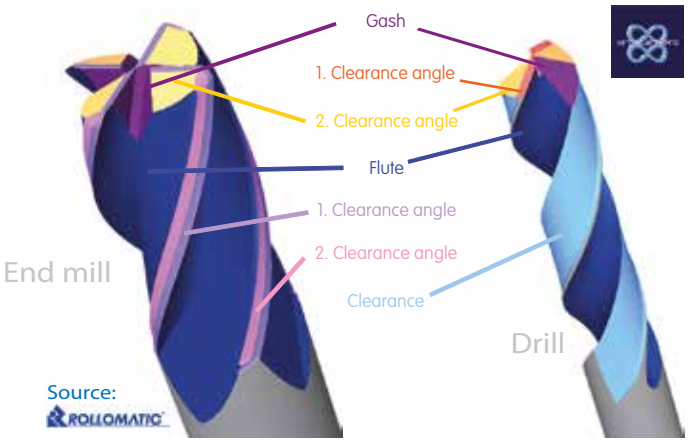
Drills, end mills, reamers, stepped tools and special-purpose tools in varying designs and geometries are described as round tools. Tool geometries are produced by grinding in successive production steps. A typical sequence starts with the preparation of the blank, (tools for trimming blanks can be found in the section for 'Diamond and cBN cut-off wheels') which is followed by flute grinding, gashing and grinding of the clearance angles.

FLUTE | GASH | CLEARANCE ANGLES

This section is structured according to the procedure described.

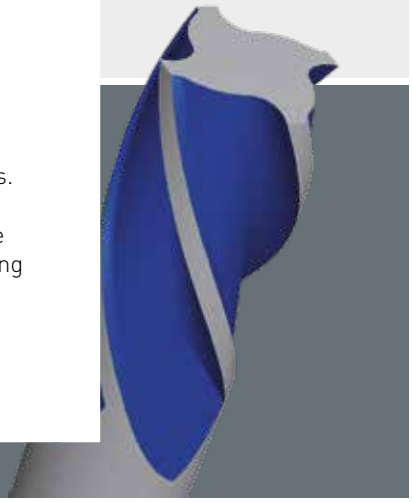
Here you see an example of an end mill and a drill. Generally, the same tool geometries are used for the individual process steps. Only flute grinding uses different grinding wheel designs.

While 1A1 and 1V1 grinding wheels are used primarily for end mills, profile grinding wheels such as 14F1 and similar (Norton WINTER shape 700) are preferred for drill production.

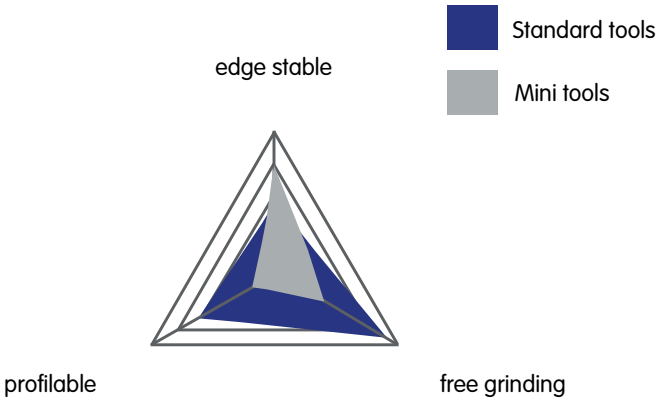


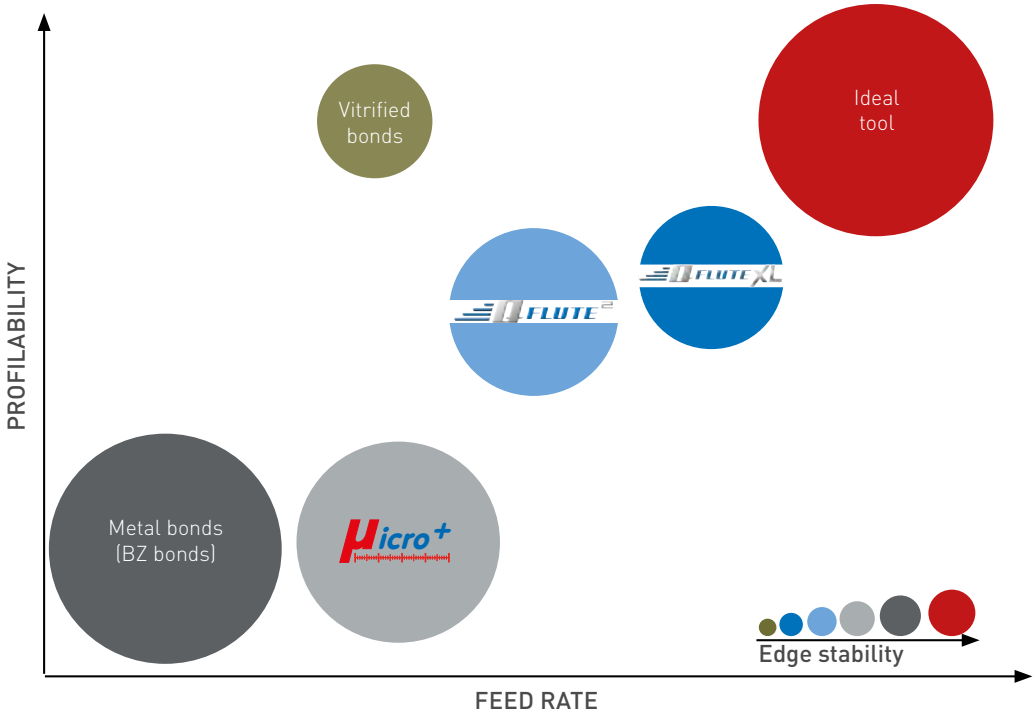
DIAMOND & CBN GRINDING WHEELS FOR FLUTE GRINDING

Flute grinding is the most time-consuming and thus most cost-intensive manufacturing step during drill and end mill production. It is necessary to optimise the machine and cooling lubricant systems as well as the abrasives. In recent years, machines have become more compact, spindle power has increased, axis paths have been reduced and machine controls have become more efficient. At the same time, Norton WINTER has developed flute grinding tools which meet these increasing requirements and which now enable the improved machine capacity to deliver a higher and more economic output. Matched to the application and the system environment, innovative Norton WINTER flute grinding wheels are always the best solution.



Grinding wheels in the Q-Flute range have proved to be particularly useful for standard tools.
The combination of excellent free-grinding behaviour and profile retention allows economic flute grinding with high feed rates. Q-Flute grinding wheels can also be dressed on the grinding machines.
Mini and micro tools require bond systems with exceptional edge stability. Norton WINTER metal bonds (BZ bonds) and high-performance resin bonds (µicro⁺) are the number one choice here.





HIGH-PERFORMANCE FLUTE GRINDING

In the last years Norton WINTER has set the benchmark in machining of round-tools with its Q-Flute² for flute grinding operations. With Q-Flute², clearly improved material removal rates are possible whilst at the same time maintaining edge stability, resulting in a successful combination of durability and free-grinding behaviour. Dramatically increased feed rates with simultaneously longer dressing intervals were achieved.

APPLICATION AREAS Q-Flute²

Q-Flute2 is the solution for all flute grinding applications in the diameter range above 3 mm. This bond system is applicable not only under oil but also under emulsion or water. It provides outstanding results when grinding tungsten carbide and HSS tools.

THE OPTIMAL ADDITION

The latest innovation of Norton WINTER for flute grinding is Q-FluteXL. Based on the wide experience in flute grinding operations by using Q-Flute², Norton WINTER started the development of a new innovative solution for flute grinding. The Q-FluteXL is the optimal addition for the established Q-Flute² and should be used everywhere, where Q-Flute² is not free grinding enough. The Q-FluteXL family is a completely new & innovative bond system, which places itself to the far increasing challenges against a modern flute grinding wheel. The possibility to adjust Q-FluteXL to every single requirement by choosing a different version is an additional benefit of Q-FluteXL.

APPLICATION AREAS Q-FluteXL

Wherever a more free grinding behaviour than Q-Flute² is required. Q-FluteXL is the optimum choice. This is the case at very high Material Removal Rates due to big workpiece diameter, straight flutes or workpiece related big contact areas. Also under bad coolant conditions or on low power machines Q-FluteXL is showing its strength.

SPECIFICATION	APPLICATIONS
Q-Flute²	TC, oil coolant
Q-Flute² W	TC, water-based cooling
Q-FluteXL	TC, oil and water-based cooling
Q-Flute²	HSS, oil and water-based cooling
Q-FluteXL	HSS, oil and water-based cooling

Norton WINTER FlutePolish

After grinding (roughing) the flute to achieve the correct geometry, the flute can be polished to produce a better surface finish. The polished surface improves the performance of drills and end mills when used on aluminium alloys, hardened steel materials or when drilling very hard wood. Polishing helps to transport material chips efficiently out of the drilled hole to reduce friction, this also helps to reduce the risk of chips becoming welded to the cutting edge. Using Norton WINTER FlutePolish is an ideal way to complete the production of round tools, with it improving the cutting edge of the tool and providing a more consistent and extended tool life.

FEATURES

- Newly developed elastic bond structure
- Increased feed rate, faster process
- Highly wear resistant
- Reduced abrasive consumption
- Can withstand high infeed and feed rates

BENEFITS

- Flexible & highly conformable
- Polishes a greater surface area of the part
- Excellent surface finish quality (mirror shine)
- Reduced set-up and cycle times, increased productivity
- Long wheel life
- Lowers overall process cost (cost per part ratio)
- Reduced loading, wheel burning and improves polish quality

SELECTION ASSISTANT FOR NORTON WINTER BOND SYSTEMS

DIAMOND GRINDING WHEELS	WEAR RESISTANCE	RECOMMENDATION FOR USE
BZ480		Metal bond for mini and micro tools
µicro⁺ series		Wear-resistant high-performance resin bonds for mini and micro tools
Q-Flute²		High-performance resin bond for flute grinding
Q-FluteXL		High-performance resin bond for flute grinding
K+920		More wear-resistant resin bond also dry grinding
K+921		More wear-resistant resin bond preferably wet grinding
K+1421R		Standard resin bond for CNC applications
K+1421N		Standard resin bond for CNC applications

CBN GRINDING WHEELS	WEAR RESISTANCE	RECOMMENDATION FOR USE
MSS444		Metal bond for mini and micro tools
Q-Flute²		High-performance resin bond for flute grinding
Q-FluteXL		High-performance resin bond for flute grinding
KSS920		More wear-resistant resin bond also dry grinding
KSS12N		Standard resin bond for CNC applications

STANDARD DIMENSIONS FOR FLUTE GRINDING

WORKPIECE	MATERIAL	MACHINE	PERIPHERAL GRINDING WHEEL		COOLANT
			SHAPE	BOND	
Drills End mills Reamers	Tungsten carbide HSS Cermet	All CNC tool grinding machines	1A1, 1V1, 14F1 a.o. Ø 50...250 T 3...30 X 5...15	See table above	Oil Emulsion
Micro drills Mini end mills Burrs	Tungsten carbide HSS	Precision tool grinding machines for mini and micro tools	3A1, 4A9, 14V1 Ø 50...200 U 2...6 X 5...10	See table above	Oil Emulsion

ROUND TOOLS FLUTE GRINDING

NORTON WINTER Q-FLUTE XL AND Q-FLUTE² EXAMPLES OF USE

CASE STUDY 1:

Q-FLUTE XL 60

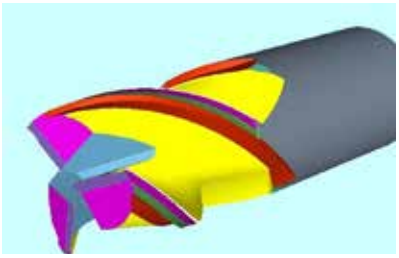
GRINDING WHEEL	D46 Q-FluteXL60
MACHINE	Reinecker WZS700
COOLANT	Oil
WORK PIECE	TC end mill Ø 20 mm
GRINDING PARAMETERS	
FEED RATE	160 mm/min
DEPTH OF CUT	3 mm
CUTTING SPEED	18 m/s
MRR	8 mm³/mm · s

BENEFITS
- 15% reduced cycle time
- 25% less wheel wear
- Wheel is working in self sharpening

CASE STUDY 2:

Q-FLUTE²

GRINDING WHEEL	D54 Q-Flute²
MACHINE	Anca
COOLANT	Oil
WORK PIECE	TC end mill Ø 12.5 mm
GRINDING PARAMETERS	
FEED RATE	250 mm/min
DEPTH OF CUT	4 mm
CUTTING SPEED	18 m/s
MRR	16 mm³/mm · s

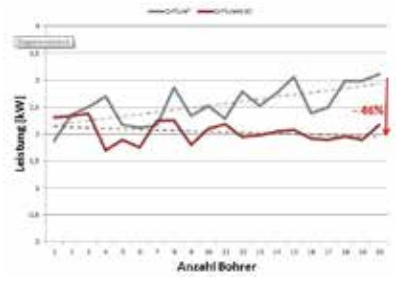


BENEFITS
- 25% higher feed rate
- Huge time savings
- Significant cost savings

CASE STUDY 3

Q-FLUTE XL 40

GRINDING WHEEL	D54 Q-FluteXL40 + FlutePolish
MACHINE	Walter Helitronic Power
COOLANT	Oil
WORK PIECE	TC drill Ø 10 mm
GRINDING PARAMETERS	
FEED RATE	200 mm/min
DEPTH OF CUT	3.5 mm
CUTTING SPEED	18 m/s
MRR	11.6 mm³/mm · s
PARAMETER FLUTE POLISHING	
FEED RATE	v_f = 180 mm/min
INFEED	a_e = 0.05...0.1mm
CUTTING SPEED	v_c = 20 m/s



BENEFITS
- 40% reduced spindle load
- 20% shorter cycle time
- Significant lower thermal stress for the work piece
- Polishing 3x faster
- Perfect cutting edge and surface qualit

Potential of improvements

Minimum Q'_w if ≥ D46 — FLUTE XL

Minimum Q'_w if D46 & D54 — FLUTE²

The feed rates stated are guidelines only and apply to both diamond and cBN tools. Feed rates have to be adjusted for small workpiece diameters, extreme flute widths and grinding wheels with a diameter of less than 100 mm.

ROUND TOOLS FLUTE GRINDING

STOCK PROGRAM Q-FLUTE² & Q-FLUTE XL⁴⁰

The demand of the market to have an extensive range of abrasive products available from stock has grown steadily in recent years. To meet this requirement we offer a new range of the proven Q-Flute² and Q-FluteXL grinding wheels available ex stock. The target is a considerably wider range of grinding wheel shapes to be delivered to our customers within a very short time.

In the future various dimensions of semi-finished components will be stored. After receiving the customer order, these semi-finished parts can be finished into a variety of grinding wheels in the shortest possible time. The delivery time for all producible grinding wheel dimensions from semi-finished components will be about 5 working days. Due to that we offer our customers maximum flexibility and shortest possible lead times. Additionally, Norton WINTER provides a layer depth increased by 60% for 1A1 grinding wheels, thus we offer clearly more abrasive layer for their money.

ROUND TOOLS FLUTE GRINDING

DRESSING ON THE PRODUCTION MACHINE

Each tool change on a grinding machine causes a degree of run-out and positional error, which can produce small deviations from the nominal tool geometry. Demands made on the accuracy of round tools, however, are constantly increasing. Norton WINTER Q-Flute grinding wheels are the solution to this problem. Q-Flute technology combines innovative flute grinding with the precise touch dressing process.

This innovative technology enables considerable quality improvements to the main and minor cutting edges, without adversely affecting grinding performance. By regularly regenerating the wheel topography, tighter tolerances and fully automatic shift operations are possible.

AREAS OF APPLICATION

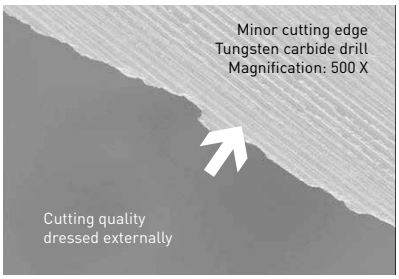
Norton WINTER Q-Flute grinding wheels finding their areas of application att all applications where high MRR are required.

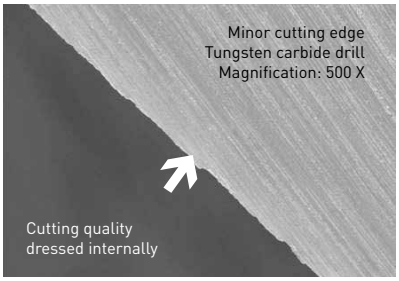
NORTON WINTER Q-FLUTE EXAMPLES OF USE

CASE STUDY 1:

Q-FLUTE²

GRINDING WHEEL	D54 Q-Flute²
DRESSER	Norton WINTER DDS Roller dresser
MACHINE	Walter Helitronic
COOLANT	Oil
WORK PIECE	TC end mill Ø 16 mm
GRINDING PARAMETERS	
FEED RATE	v_f = 150 mm/min
DEPTH OF CUT	a_e = 3.5 mm
CUTTING SPEED	v_c = 18 m/s
SPECIFIC MATERIAL REMOVAL RATE	Q'_w = 8.75 mm³/mm · s
DRESSING PARAMETERS	
SPEED RATIO	q_d = 0.9
OVERLAP RATE	U_d = 3
DRESSING INFEED	a_{ed} = 2x3 µm





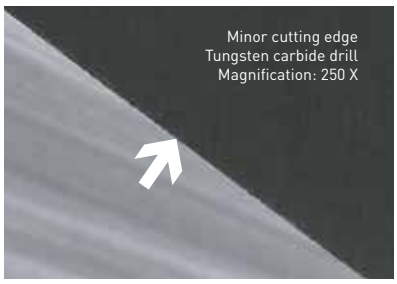
BENEFITS

- Very good cutting quality
- Maximum profile accuracy
- Tightest tolerances

CASE STUDY 2:

Q-FLUTE XL⁴⁰

GRINDING WHEEL	D46 Q-FluteXL⁴⁰
DRESSER	Walter Helitronic
COOLANT	Oil
WORK PIECE	TC drill, Ø 10 mm
GRINDING PARAMETERS	
FEED RATE	v_f = 200 mm/min
DEPTH OF CUT	a_e = 3.5 mm
CUTTING SPEED	v_c = 18 m/s

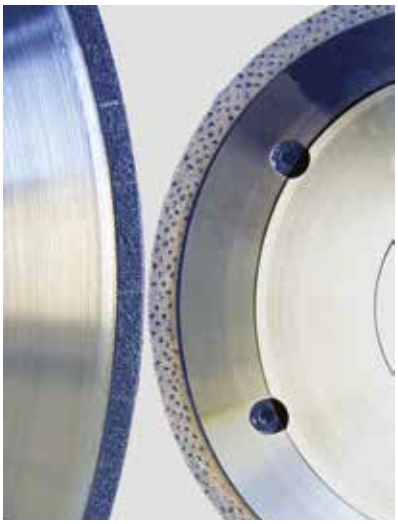


NORTON WINTER DIAMOND DRESSING SYSTEM (DDS)

The Diamond Dressing System (DDS) allows CNC dressing of diamond grinding wheels directly on production grinders.

Despite the extreme hardness of diamond in both cases, the same physical correlations are found when dressing "softer" abrasive materials such as Al_2O_3, SiC, SG, TG and cBN.

Even when dressing specifically designed diamond grinding wheels with the DDS roller dresser, the result can be influenced by overlap rate and speed ratio.



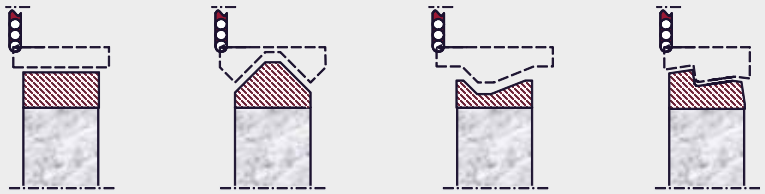
DRESSING PARAMETERS

Speed ratio:	q_d = 0.6...0.9
Overlap rate:	U_d = 2...6
Dressing infeed:	a_{ed} = 1...5 µm

PROFILE EXAMPLES

CNC-precision dressing
on the production machine

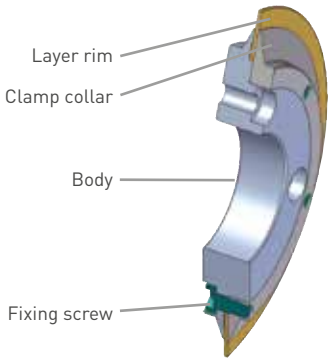
- greater profile accuracy
- very easy to automate
- dressing with production speeds



CHARACTERISTICS

The DDS diamond CNC dresser consists of a single sintered diamond layer, which is clamped in a two-piece steel holder. This ensures a constant layer width with a consistently high active diamond content throughout its entire lifetime. The design permits the highest possible degree of flexibility when dressing different profiles in a single working cycle. The only requirement is a grinding machine with CNC dressing spindle and an acoustic emission contact sensor.

With this dressing system, a broad range of different profiles can be created in a single working step.



PLEASE NOTE

Further information and types of form rollers for CNC dressing can be found in catalogue no. 5 'Dressing tools'.

PRECISION FLUTE GRINDING FOR MINI AND MICRO TOOLS

As well as innovation in new materials and tool designs, the recent trend towards miniaturisation has become considerably more important.

From mini- and micro- down to nano tools, nowadays tools with outer diameters below 0.1 mm are no longer exceptional. The production of these tools demands special grinding wheels with very small and stable edge radii.

Resin bonded grinding wheels are competing against metal bonded versions which are considerably slower by comparison (approx. 50% of the feed rate of resin bonds) but they are characterized by greater edge stability. Metal bonded grinding wheels achieve a dressing interval up to five times longer.

The decision whether to use resin bonds or metal bonds is often a matter of personal preference. It is a question of process control whether profile retention with slower feed rates or high output with high feed rates will be cost-effective.

The Norton WINTER range therefore consists of metal bonds with great edge stability (BZ bonds for diamond and MSS bonds for cBN) as well as resin bonds with perfect edge stability which are marketed under µicro⁺ brand. The tools of the Norton WINTER µicro⁺ range are grinding wheel systems that have been specifically developed for these requirements, which despite fast feed rates are characterised by their perfect edge stability compared to traditional resin bonds.

AREAS OF APPLICATION

Classic areas of application are mini and micro drills and end mills for electronics, medical technology and automotive industry. In addition, these grinding wheels can be used for similar metal removal tasks, e.g. burrs.

RECOMMENDATIONS DIAMOND

Ø 0.05 mm - 0.75 mm	D10...D20A	µicro⁺6013	C125
Ø 0.75 mm - 2 mm	D20A...D25	µicro⁺6015	C125
Ø 0.75 mm - 2 mm	D20A...D46	BZ480	C125
Ø 2 mm - 4 mm	D33...D46	µicro⁺6065	C125

RECOMMENDATIONS CBN

Ø 0.75 mm - 2 mm	B15...B35	µicro⁺6005	V300
Ø 0.75 mm - 2 mm	B25...B46	MSS444	V240
Ø 2 mm - 4 mm	B39...B64	SP4006T	V240

NORTON WINTER µICRO⁺ EXAMPLES OF USE

APPLICATION EXAMPLE 1

GRINDING TOOL	D46 µicro⁺ 6065 C135 A
GRINDING MACHINE	Kirner K360
COOLANT	Oil
WORK PIECE	Tungsten carbide burr, Ø 6 mm
GRINDING PARAMETERS	
FEED RATE	v_f = 125 mm/min
INFEED	a_e = ca. 0.4 mm
CUTTING SPEED	v_c = 35 m/s
SPECIFIC MATERIAL REMOVAL RATE	Q'_w = 0.83 mm³/mm · s

BENEFITS

- Up to 300% increase in feed rate
- Impressive increase in capacity
- Huge reduction in costs

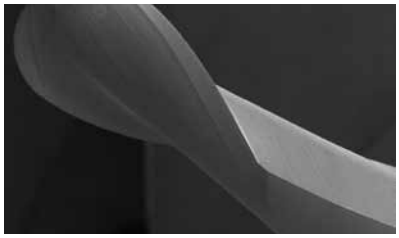
APPLICATION EXAMPLE 2

GRINDING TOOL	D15B µicro⁺ 6055 C125 A
GRINDING MACHINE	Rollomatic 620XS
COOLANT	Oil
WORK PIECE	Tungsten carbide drill, Ø 0.8 mm
GRINDING PARAMETERS	
FEED RATE	v_f = 40 mm/min
INFEED	a_e = 0.3 mm
CUTTING SPEED	v_c = 25 m/s

BENEFITS
- 45% cycle time reduction
- Perfect edge quality
- Longer dressing intervals

APPLICATION EXAMPLE 3

GRINDING TOOL	D15B µicro⁺ 6055 C125 E
GRINDING MACHINE	Rollomatic Nano6
COOLANT	Oil
WORK PIECE	Tungsten carbide end mill, Ø 0.05 mm
GRINDING PARAMETERS	
FEED RATE	v_f = 0.8mm/min
INFEED	a_e = 0.015 mm
CUTTING SPEED	v_c = 25 m/s



BENEFITS
- Good dressability
- Very good surface quality
- Maximum profile accuracy

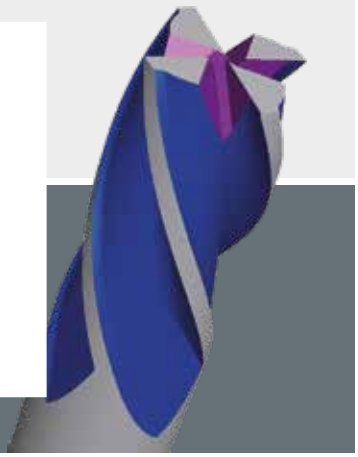
DIAMOND & CBN GRINDING WHEELS FOR GASHING

Gashing reduces the width of the chisel edge of a drill or end mill in order to reduce the forces during subsequent use of the tool. 12V9 wheels or pointed 1V1 / 14V1 wheels are generally used (the typical angle is 45°). Occasionally, 1A1 and 11V9 wheels are used. The advantage of 1V1 wheels over 12V9 wheels is a more rigid body.



SELECTION ASSISTANT FOR NORTON WINTER BOND SYSTEMS

DIAMOND GRINDING WHEELS	WEAR RESISTANCE	RECOMMENDATION FOR USE
V-PRIME	↑	Innovative high-performance resin bond for gashing and grinding of clearance angles
V-Pro4073		High-performance resin bond for gashing and grinding of clearance angles
Q-Flute²		High-performance resin bond for flute grinding
K+980		More wear-resistant, resin bond with high edge stability
K+921		More wear-resistant resin bond preferably wet grinding
K+1421R		Standard resin bond for CNC applications
K+888R		Universal resin bond for dry grinding
K+1410		Free-grinding resin bond for dry grinding

CBN GRINDING WHEELS	WEAR RESISTANCE	RECOMMENDATION FOR USE
V-PRIME	↑	Innovative high-performance resin bond for gashing and grinding of clearance angles
V-Pro4073		High-performance resin bond for gashing and grinding of clearance angles
KSS980		More wear-resistant, resin bond with high edge stability
KSSJY		Universal resin bond for wet grinding
KSS12N		Standard resin bond for CNC applications

INNOVATIVE GASHING WITH V-PRIME & V-PRO

Norton WINTER V-PRIME is the new and improved version of V-PRO wheels for round tool grinding, delivering the ultimate edge stability.

V-PRIME has been designed to provide excellent edge stability in gashing. In today's challenging economic environment, it is more important than ever to maintain constant wheel geometry for as long as possible, without the need for correction, as this enables increased output and improved quality. The new V-PRIME can be easily implemented without any machine or process adjustments, offering manufacturers immediate improvements. The well-known and approved Norton WINTER V-Pro will be kept for applications where a hard-brittle hybrid bond is preferred.

With V-PRIME and V-Pro, Norton WINTER now offers the perfect solution for every application problem to design an optimum process with the shortest cycle times and longest life times.

Apart from 12V9 grinding wheels, V-PRIME and V-Pro are available in other geometries for gashing of round tools

APPLICATION EXAMPLE - GASHING OF Ø 12mm TUNGSTEN CARBIDE END MILL

GRINDING TOOL	D64 V-PRIME5406
GRINDING MACHINE	ANCA MX7 Linear
COOLANT	Oil
WORK PIECE	Tungsten carbide end mill, Ø 12mm
GRINDING PARAMETERS	
FEED RATE	v_f = 100 mm/min
INFEED	a_e = ≈1.3 mm
CUTTING SPEED	v_c = 22 m/s

BENEFITS

- ≈20% reduction of grinding time
- Significant cost savings
- Faster machine set-up with easier wheel preparation

APPLICATION EXAMPLE - GASHING OF TUNGSTEN CARBIDE DRILLS

GRINDING TOOL	D64 V-Pro4073 C125 A
GRINDING MACHINE	ANCA TX7+
COOLANT	Oil
WORK PIECE	Tungsten carbide drill, Ø 9mm
GRINDING PARAMETERS	
FEED RATE	v_f = 60 mm/min
INFEED	a_e = 0.5 mm
CUTTING SPEED	v_c = 18 m/s

BENEFITS

- Reduction of down time through increased dressing intervals
- 25% reduction of grinding time
- Considerable improvement of productivity

ROUND TOOLS GASHING

APPLICATION EXAMPLE–RE-GRINDING OF HSS END MILLS

GRINDING TOOL	B107 V-Pro4073 V300 A
GRINDING MACHINE	Schneeberger Norma
COOLANT	Oil
WORK PIECE	HSS end mill, Ø 35mm
GRINDING PARAMETERS	
FEED RATE	v_f = 40 mm/min
INFEED	a_e = 1.5 mm
CUTTING SPEED	v_c = 35 m/s

BENEFITS

- Very good edge stability and lifetime
- 30% reduced grinding time
- Significantcost savings

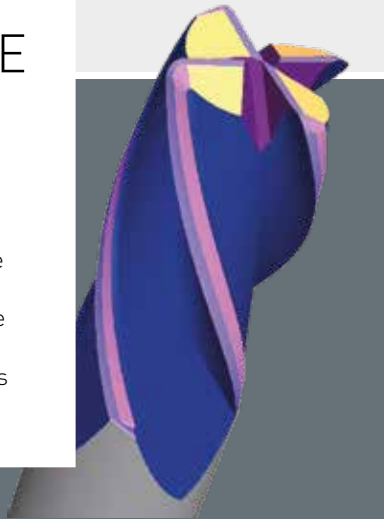
DIAMOND & CBN GRINDING WHEELS FOR CLEARANCE ANGLE GRINDING

Grinding clearance angles on the cutting edge of a tool reduces the contact area between the tool and the workpiece during drilling or milling processes. One or two clearance angles are usually ground on the face. Up to two clearance angles / clearances can be produced on the circumference; on some tools these take the form of radial clearance grinding. For grinding clearance angles 11V9 cup wheels or similar geometries are typically used. Our extensive standard range can be found on the following pages of this catalogue. 12V9 or surface grinding wheels are also used. Compatible tools with these geometries are listed in the chapters on flute grinding and gashing.



SELECTION ASSISTANT FOR NORTON WINTER BOND SYSTEMS

DIAMOND GRINDING WHEELS	WEAR RESISTANCE	RECOMMENDATION FOR USE
V-PRIME	↑	Innovative high-performance resin bond for gashing and grinding of clearance angles
V-Pro4073		High-performance resin bond for gashing and grinding of clearance angles
K+980		More wear-resistant, resin bond with high edge stability
K+921		More wear-resistant resin bond preferably wet grinding
K+1421R		Standard resin bond for CNC applications
K+888R		Universal resin bond for dry grinding
K+1410		Free-grinding resin bond for dry grinding

CBN GRINDING WHEELS	WEAR RESISTANCE	RECOMMENDATION FOR USE
V-PRIME	↑	Innovative high-performance resin bond for gashing and grinding of clearance angles
V-Pro4073		High-performance resin bond for gashing and grinding of clearance angles
KSS980		More wear-resistant, resin bond with high edge stability
KSS12N		Standard resin bond for CNC applications

STANDARD DIMENSIONS FOR THE GRINDING OF CLEARANCE ANGLES

INNOVATIVE CLEARANCE ANGLE GRINDING WITH V-PRIME AND V-PRO

Norton WINTER V-PRIME is the new and improved version of V-PRO wheels for round tool grinding, delivering the ultimate edge stability.

V-PRIME has been designed to provide excellent edge stability in clearance angle grinding. In today's challenging economic environment, it is more important than ever to maintain constant wheel geometry for as long as possible, without the need for correction, as this enables increased output and improved quality. The new V-PRIME can be easily implemented without any machine or process adjustments, offering manufacturers immediate improvements.

The well-known and approved Norton WINTER V-Pro will be kept for applications where a hard-brittle hybrid bond is preferred.

With V-PRIME and V-Pro, Norton WINTER now offers the perfect solution for every application problem to design an optimum process with the shortest cycle times and longest life times.

Apart from 11V9 grinding wheels, V-PRIME and V-Pro are available in other geometries for clearance angle grinding of round tools.

APPLICATION EXAMPLE - CLEARANCE GRINDING OF Ø 12mm TUNGSTEN CARBIDE END MILL

GRINDING TOOL	D64 V-PRIME5406
GRINDING MACHINE	ANCA MX7 Linear
COOLANT	Oil
WORK PIECE	Tungsten carbide end mill, Ø 12mm
GRINDING PARAMETERS	
FEED RATE	v_f = 250 mm/min
INFEED	a_e = ≈0.3 mm
CUTTING SPEED	1st v_c = 22 m/s 2nd v_c = 18 m/s

BENEFITS

- ≈15% reduction of grinding time
- Significant cost savings
- Faster machine set-up with easier wheel preparation

APPLICATION EXAMPLE - CLEARANCE ANGLE (CIRCUMFERENCE)

GRINDING TOOL	D64 V-Pro4073 C125 A
GRINDING MACHINE	SAACKE
COOLANT	Oil
WORK PIECE	Tungsten carbide drills; Ø 11 mm
GRINDING PARAMETERS	
FEED RATE	v_f = 120 mm/min
INFEED	a_e = 1.2 mm
CUTTING SPEED	v_c = 17 m/s

BENEFITS

- 2 times longer dressing interval
- Huge time savings
- Significant increase in productivity

ROUND TOOLS CLEARANCE ANGLE GRINDING

APPLICATION EXAMPLE – CLEARANCE GRINDING (POINT RELIEF)

GRINDING TOOL	B107 V-Pro4073 V300 A
GRINDING MACHINE	Walter Helitronic
COOLANT	Oil
WORK PIECE	HSS-Fräser Ø.24 mm
GRINDING PARAMETERS	
FEED RATE	v_f = 120 mm/min
INFEED	a_e = app. 1 mm
CUTTING SPEED	v_c = 40 m/s

BENEFITS
- Fantastic lifetime
- Huge reduction of cycle time

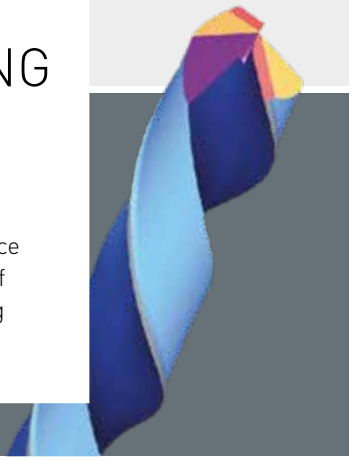
Apart from grinding clearance angles, the items listed on these pages are also suitable for flute grinding, OD grinding, gashing, radial clearance grinding and radius sharpening, depending on the machine software.

DIAMOND & CBN GRINDING WHEELS FOR UNIVERSAL GRINDING

Universal grinding tasks include all the applications on universal tool grinding machines. Grinding wheels for grinding and re-sharpening of different tools are listed. Depending on the type of bond, the grinding wheels are suitable for either / or dry and wet grinding. According to the tool type and machine type, different geometries are required. Different types of cup wheels and several surface grinding wheels are listed on the following pages. Detailed information on fields of application is shown below each table. 1A1 grinding wheels for OD and ID grinding are listed in the 'Mould and Die' chapter.



SELECTION ASSISTANT FOR NORTON WINTER BOND SYSTEMS

DIAMOND GRINDING WHEELS	WEAR RESISTANCE	RECOMMENDATION FOR USE
BZ560		Metal bond for wet and dry grinding
M+789		Special bond for tungsten carbide-steel combination grinding, dry
K+1414R		Resin bond for tungsten carbide-steel combination grinding, dry
K+1414N		Resin bond for tungsten carbide-steel combination grinding, dry
K+1414J		Resin bond for tungsten carbide-steel combination grinding, dry
K+888RY		Universal resin bond for wet grinding
K+888NY		Universal resin bond for wet grinding
K+888R		Universal resin bond for dry grinding
K+888N		Universal resin bond for dry grinding
K+888J		Universal resin bond for dry grinding
K+888F		Fine-grit resin bond for polish grinding
K+1410		Free-grinding resin bond for dry grinding
K+777R		Universal resin bond for fine-grain applications
K+777N		Universal resin bond for fine-grain applications
K+777J		Universal resin bond for fine-grain applications
KR250		Free-grinding resin bond, wet/dry grinding
K+730		Very free-grinding fine-grain bond, dry grinding possible

CBN GRINDING WHEELS	WEAR RESISTANCE	RECOMMENDATION FOR USE
KSS920		More wear-resistant resin bond also dry grinding
KSSTY		Universal resin bond for wet grinding
KSSRY		Universal resin bond for wet grinding
KSS12		Standard resin bond for CNC applications
KSS10N		Universal resin bond for tool grinding
KSS10J		Universal resin bond for tool grinding
KR102		Free-grinding resin bond for wet grinding
KSS007		Free-grinding resin bond for dry grinding and under oil
KSS1065		Particularly free-grinding dry grinding bond

APPLICATION
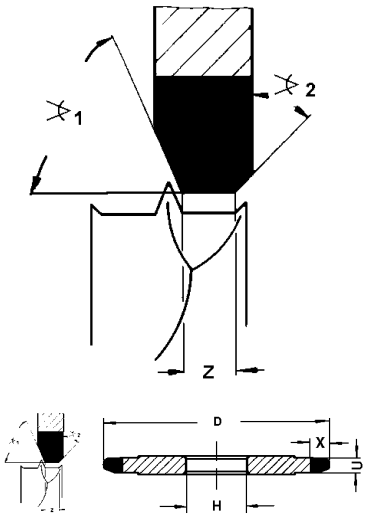
For grinding spiral HSS tools, e.g. on NC tool grinding machines. Reciprocating and creep-feed grinding. Suitable for cutting face grinding.

DIAMOND & CBN GRINDING WHEELS FOR SPECIAL TOOLS

This chapter provides an insight into special tools. It is impossible to itemize the wide variety of round tools in detail. If you require grinding tools for different operations, please contact us, we will find the best solution for you.

PROFILE GRINDING OF TUNGSTEN CARBIDE DOWEL DRILLS



APPLICATION EXAMPLE

NORTON SAINT-GOBAIN WINTER

GRINDING TOOL	D64 K+888R C75 or K+921 C100
GRINDING MACHINE	Deckel S11
COOLANT	Dry
WORK PIECE	Tungsten carbide dowel drills, Ø 4 to 18 mm
GRINDING PARAMETERS	
FEED	v_f = approx. 300 mm/min (manual)
INFEED	a_e = by hand
CUTTING SPEED	v_c = 18 m/s

BENEFITS

- High profile retention, quick removal
- Good surface, no heat damage

For grinding of single- or multi-edge router bits (cutting face bevel).

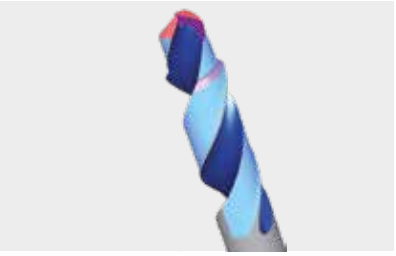
APPLICATION EXAMPLES FOR SPECIAL TOOLS

APPLICATION EXAMPLE 1 - PEEL GRINDING OF STEPPED DRILLS

GRINDING TOOL	D64 BZ4415 C100 E
GRINDING MACHINE	Rollomatic NP4
COOLANT	Oil
WORKPIECE	Tungsten carbide drill Ø 14 mm by Ø 10.3 mm
GRINDING PARAMETERS	
FEED	v_f = 3.6 mm/min
INFEED	a_e = 1.85 mm
CUTTING SPEED	v_c = 63 m/s



BENEFITS

- Very good surface quality
- Superb edge stability

APPLICATION EXAMPLE 2 - GRINDING OF KNURLED PROFILE ON ROUGHING MILLS

GRINDING TOOL	D64 SP4006R C125 A
GRINDING MACHINE	Walter Helitronic
COOLANT	Oil
WORKPIECE	Tungsten carbide roughing end mill Ø 20 mm flute length 90 mm
GRINDING PARAMETERS	
FEED	v_f = 100 mm/min
INFEED	a_e = 2.5 mm
CUTTING SPEED	v_c = 25 m/s
SPECIFIC MATERIAL REMOVAL RATE	Q'_w = 4.16 mm³/mm · s

BENEFITS

- Substantially faster than crushable metal bonds
- Higher tool life than crushable metal bonds

APPLICATION EXAMPLE 3 - THREAD GRINDING ON TAPS

GRINDING TOOL	D25 V+2046 N1TC-23 C100 E
GRINDING MACHINE	SMS
COOLANT	Oil
WORKPIECE	Tungsten carbide tap
GRINDING PARAMETERS	
FEED	v_f = 10 mm/min
INFEED	a_e = 0.4 mm
WORKPIECE SPEED	n^w = 5 min^{-1}
CUTTING SPEED	v_c = 45 m/s
SPECIFIC MATERIAL REMOVAL RATE	Q'_w = 4.16 mm³/mm · s

BENEFITS

- Simple-to-dress diamond grinding wheel (with profile roller, see photo)
- Good adherence to profile, thus high tool life

GRINDING TOOLS FOR MACHINING CIRCULAR SAWS AND BAND SAWS

GRINDING TOOLS FOR MACHINING CARBIDETIPPED CIRCULAR SAW BLADES 49
Grinding wheels for the tooth face 51
Grinding wheels for top grinding 56
Grinding wheels for flank grinding 60
Grinding pins for hollow ground saw blades 62
Grinding wheels for chip breaker flutes 63
GRINDING WHEELS FOR STELLITE CIRCULAR SAW BLADES 64
GRINDING WHEELS FOR HSS CIRCULAR SAW BLADES 65
GRINDING WHEELS FOR MACHINING BAND SAWS 67

SAWS

Various types of saws (e.g. circular saws and band saws)
are used in the woodworking and plastics processing industries.

Grinding technology is used to create the tooth geometry of these saws.
A basic distinction can be made between one-piece saws and composite saws.

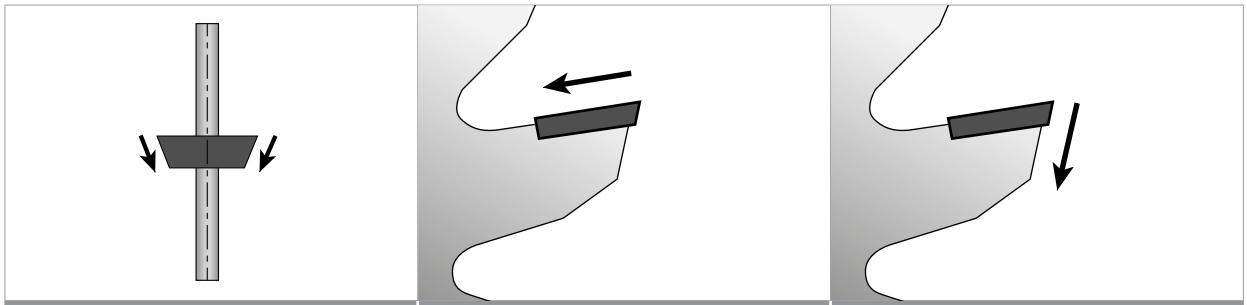
For example, HSS band saws and HSS circular saw blades are one-piece saws. The tooth geometry required for these saws is ground under CNC-controll using radial grinding wheels (see our 'profile S' programme). Saws of this type are sometimes also manufactured as segmented saws.

Composite saws, on the other hand, have carbide, cermet or diamond tips brazed onto a metal core.
The shape of the teeth (face, top and flank) is then ground sequentially (see illustration on next page).

Information
Further information on applications and products
can be found at
www.nortonabrasives.com

GRINDING TOOLS
FOR MACHINING CARBIDE-TIPPED CIRCULAR SAW BLADES

The manufacture of tungsten carbide-tipped circular saw blades consists of a number of steps that are performed sequentially on different machines. The first step is flank grinding, followed by the face and top grinding. Next the chip breaker flutes and hollow-tooth profiles are produced as required.



FLANK GRINDING | FACE GRINDING | TOP GRINDING

These steps can be carried out on a number of different machines, each needing its own grinding wheel geometry. With the unusually large range of Norton WINTER grinding wheels available we offer the optimum tool for all machines and applications. The following table is colour coded to help you quickly and easily find the wheel you need for your saw grinding machine.

SAWS

MACHINE	MACHINE TYPE	CODING
VOLLMER BIBERACH	CB, CC, CE, CEN, CEP, CHC, CHC, CHM, CHP, CHT, CNHB, CX and others	1
	CHD	2
	CC, CEF, CFL, CHAFT, CHAFTE, CHHF, CHF and others	3
VOLLMER DORNHAN	Finimat 600	1
	Finimat 800, Finimax	2
	Finimat Beta, Gamma	3
	Uniläpp	4
	Uniläpp F2	5
	Duo TS	6
WOODTRONIC	NC2, NC3, C4, C5	1
	CNC5	2
	CNC6F	3
AKEMAT	Akemat B / B10	1
	Akemat U / U10	2
	Akemat F / F10	3
WIDMA	Unimat	1
	HKS700/HIII	2
	HKS400, FS1000	3

For universal grinding machines and for Widma machines with bore H20 (BS700, HKS 500, HKS700, HKS700/H, HKS700/HI, HKS700/HII and others), please see our product programme in the chapter 'Milling cutters'.

GRINDING WHEELS FOR THE TOOTH FACE

Depending on the tooth pitch, differently shaped grinding wheels are needed to grind the tooth face. The greater the number of teeth around the circumference, the narrower the space between them and the thinner the grinding wheel has to be. Even the narrowest tooth gaps can be machined with our Tiger grinding wheels. For reasons of stability, conventional tooth gaps are mainly ground using 4A2, 12V2 or 222 grinding wheels.

SELECTION ASSISTANT FOR NORTON WINTER BOND SYSTEMS

DIAMOND GRINDING WHEELS	WEAR RESISTANCE	RECOMMENDATION FOR USE
Tiger II L	↑	Wear-resistant bond to improve life for tooth-face grinding
Tiger II+		Wear-resistant bond to improve surface for tooth-face grinding
Tiger / Tiger II		Wear-resistant resin bond for tooth-face grinding
K+920 / K+921		Wear-resistant resin bond for tooth-face grinding
K+4821		Free-grinding CNC bond, e.g. for Cermet
K+888TY		Universal resin bond for wet grinding
K+888RY		Universal resin bond for wet grinding

STANDARD DIMENSIONS FOR GRINDING THE TOOTH FACE

WORKPIECE	MATERIAL	MACHINE	CUP GRINDING WHEELS		COOLANT
			SHAPE	BOND	
Circular saw blade tooth face grinding	Tungsten carbide Cermet	All established saw grinding machines	4A2, 12V2, 12V9, 222 Ø 100...200 W 2.3...8 X 2...5.5	Various bonds (see above)	Emulsion Oil

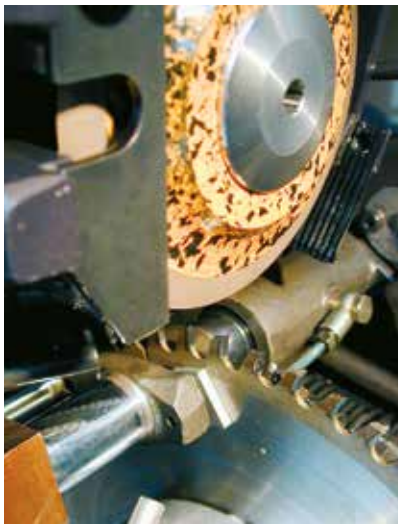
Other dimensions on request

TIGER

The Norton WINTER Tiger grinding wheel is the solution for economically grinding the cutting face on carbide-tipped saw blades.

The innovative geometry of the Tiger grinding wheel enables the tooth face to be ground without difficulty even where the chip spaces are narrow. The new design of the Tiger grinding wheel enables markedly narrower pitches to be machined.

The approved Norton WINTER K+bonds also guarantee long wheel life. Consequently, Tiger grinding wheels make every face grinding process not only faster, but economically more attractive.



SAWS CARBIDE-TIPPED CIRCULAR SAW BLADES - FACE

TIGER II TIGER II+ TIGER IIL

The Tiger II grinding wheel from Norton WINTER is the improved version of the proven Tiger face grinding wheel.
Tiger II+ and Tiger IIL as the result of the successful development of Tiger II are the latest generation of TigerII grinding wheels;
Tiger II+ has been designed to offer improved quality of ground parts, whilst Tiger IIL offers improved lifetime.
It is designed with a stable alu-phenolic body that reduces grinding pressure even further and in addition offers a high degree of fracture resistance.
With an angle of 25°, and on the new Tiger II 20° an even narrower angle of just 20°, narrow pitches are no problem for the Tiger II grinding wheel.
The Tiger II grinding wheel is the perfect combination of innovative wheel geometry and Norton WINTER's powerful K+ bonds.

RECOMMENDED USE

TIGER II

GRINDING TOOL	Tiger or Tiger II
MACHINE	Vollmer CHD
COOLANT	Oil
WORKPIECE	Carbide-tipped circular saw
GRINDING PARAMETERS	
FEED	v_f = 3...10 mm/s
INFEED	a_e = 0.05...0.2 mm
CUTTING SPEED	v_c = 45 m/s
SPECIFIC MATERIAL REMOVAL RATE	Q'_w = 0.15...2 mm³/mm · s

BENEFITS

- For narrow chip spaces
- High fracture resistance

ADVANTAGES OF THE TIGER AND TIGER II FACE GRINDING WHEELS

- Versions available for all automatic saw sharpening machines
- Particularly suitable for very narrow chip spaces
- Produces a very flat cutting face with no distortion
- No aluminium welding
- Self-dressing body (Tiger, Tiger II has no support of layer)
- Shorter grinding times, reduced grinding path (see diagram)
- Very long wheel life

GRINDING WHEELS FOR TOP GRINDING

Top grinding describes the peripheral grinding process of circular saw blades. This has two purposes: it ensures that the circularity of the saw is optimized and it defines the wedge and clearance angles, both of which are crucial for the cutting performance of any circular saw.

SELECTION ASSISTANT FOR NORTON WINTER BOND SYSTEMS

DIAMOND GRINDING WHEELS	WEAR RESISTANCE	RECOMMENDATION FOR USE
K+921	↑	More wear-resistant resin bond preferably wet grinding
K+1313RY		Resin bond for mixed grinding and wet grinding
K+1421R		Standard resin bond for CNC applications
K+4821		Free-grinding CNC bond, e.g. for Cermet
K+888RY		Universal resin bond for wet grinding
K+1066		Resin bond for top grinding (resharpening, copes with body contact)
K+434		Free-grinding resin bond (synthetic coolant)
K+777N		Free-grinding resin bond (production grinding, oil)

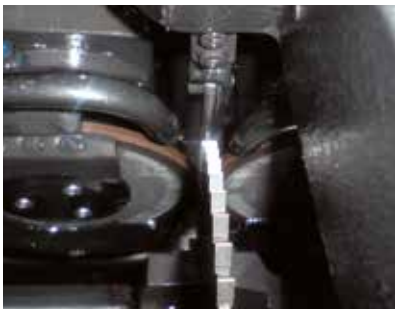
GRINDING WHEELS FOR FLANK GRINDING

The cutting width of the circular saw blade is defined during the flank grinding process.

Two grinding wheels are simoultaneously fed from both sides to obtain the defined tooth width.



SELECTION ASSISTANT FOR NORTON WINTER BOND SYSTEMS

DIAMOND GRINDING WHEELS	WEAR RESISTANCE	RECOMMENDATION FOR USE
K+921		More wear-resistant resin bond preferably wet grinding
K+888NY		Universal resin bond for wet grinding
K+888JY		Universal resin bond for wet grinding
K+730		Very free-grinding fine-grain bond, dry grinding possible

GRINDING PINS FOR HOLLOW GROUND SAW BLADES

There is a wide variety of tooth geometries to choose from for composite circular saw blades. Depending on the intended use of the saw, the tooth design can be flat, alternate, trapezoid or any combination of these.

A saw can also have hollow ground teeth. The concave shape of the teeth gives very fine cuts with no burrs, thus making the saw highly suitable for processing veneered wood and laminated chipboards.

The rounded shape of hollow ground teeth is produced with 1A1W grinding pins. Calculation of the needed grinding pin diameter:
D = 2 x W + 1 (W = width of the saw blade)

SELECTION ASSISTANT FOR NORTON WINTER BOND SYSTEMS

DIAMOND GRINDING WHEELS	WEAR RESISTANCE	RECOMMENDATION FOR USE
KS449	↑	More wear-resistant resin bond preferably wet grinding
K+920		More wear-resistant resin bond also for dry grinding
K+921		More wear-resistant resin bond preferably wet grinding
K+888TY		Universal resin bond for wet grinding
K+888RY		Universal resin bond for wet grinding

GRINDING WHEELS FOR CHIP BREAKER FLUTES

Chip breaker flutes are sometimes ground into the clearance area of the saw tooth in order to optimize the chip breakage and chip removal during sawing operations. Profile wheels (Norton WINTER shape 34P) or 1A1R grinding wheels with resin or metal bonds are used for this.

SELECTION ASSISTANT FOR NORTON WINTER BOND SYSTEMS

DIAMOND GRINDING WHEELS	WEAR RESISTANCE	RECOMMENDATION FOR USE

GRINDING WHEELS
FOR STELLITE CIRCULAR SAW BLADES

Typical applications such as face, top and flank grinding are performed on HSS and Stellite circular saws as well as on tungsten carbide-tipped saw blades. The kinematics of the applications are identical with those for tungsten carbide-tipped saws.
The bond KSSRY has been particularly developped for cBN grinding wheels.

GRINDING WHEELS
FOR HSS CIRCULAR SAW BLADES

HSS saw blades are ground from the solid on special CNC grinding machines.
Very wear resistant profile wheels like 14F1 and similar (Norton WINTER shape 700) guarantee economic grinding processes.
For this application Norton WINTER has developed the innovative ProCurve range, which is successfully used for both initial profiling and re-sharpening under oil- and emulsion coolant.

SELECTION ASSISTANT FOR NORTON WINTER BOND SYSTEMS

DIAMOND GRINDING WHEELS	RECOMMENDATION FOR USE
ProCurve	Universal bond for HSS saws (emulsion coolant)
K+888TY	Universal resin bond for wet grinding

STANDARD DIMENSIONS FOR GRINDING ONE-PIECE CIRCULAR SAW BLADES

WORKPIECE	MATERIAL	MACHINE	PERIPHERAL GRINDING WHEEL		COOLANT
			SHAPE	BOND	
Circular saw blades	HSS Tungsten carbide	All established saw grinding machines	700 Ø 150, 200 U 1.3...6 X 6.5...15	700 Ø 150, 200 U 1.3...6 X 6.5...15	Oil Emulsion

Other dimensions on request

APPLICATION EXAMPLE (INITIAL PROFILING)

GRINDING TOOL	ProCurve
MACHINE	Loroch KBN 710
COOLANT	Oil
WORKPIECE	HSS circular saw blade, Ø 400 mm Thickness 2.5 mm, 180 teeth
GRINDING PARAMETERS	
FEED	v_f = 10.6 teeth / min
INFEED	a_e = 2.79 mm
CUTTING SPEED	v_c = 60m/s

BENEFITS

- 10% higher feed rate
- No burn
- Very little burr formation

Tungsten carbide saw blades are primarily designed with carbide tips on steel blades. However, some applications require solid metal blades. Here, the same wheel geometries as for HSS saw blades are applicable.

GRINDING WHEELS
FOR MACHINING BAND SAWS

Band saws are ground using peripheral grinding wheels. These have either simple profiles (14F1, 1V1) or coordinate profiles (Norton WINTER shape 700).
Typical machines are the Vollmer-Biberach and Iseli. These machines are fitted with either cBN grinding wheels or conventional AL_2O_3 wheels.

SELECTION ASSISTANT FOR NORTON WINTER BOND SYSTEMS

DIAMOND GRINDING WHEELS	WEAR RESISTANCE	RECOMMENDATION FOR USE
KM64	↑	Standard resin bond for Stellite
KSS007N		Free-grinding resin bond for dry grinding

			SHAPE	BOND	
Band saws	HSS Stellite	All established band saw grinding machines	14F1, 1V1, 700 Ø 250, 300 U (variable) X (variable)	KSS007 KM64	Oil Emulsion

Other dimensions on request

APPLICATION EXAMPLE (INITIAL PROFILING)

NORTON SAINT-GOBAIN WINTER

GRINDING TOOL	1V1-300-10-10 50.8 B126 KM64 V24
MACHINE	Vollmer CA 300
COOLANT	Emulsion
WORKPIECE	Stellite-tipped band saw, l = 11.76 m, Thickness 1.8 mm, 300 teeth
GRINDING PARAMETERS	
FEED	v_f = 20 teeth / min
INFEED	a_e = 1 mm
CUTTING SPEED	v_c = 63 m/s

BENEFITS

- Very low wear
- Good price-performance ratio

Because of the large number of profiles, we do not keep grinding wheels in stock. Please get in touch with us to find the best solutions for your machining requirements.

NOTES

TRENDS

In the area of inserts, a wide variety of materials and tool geometries are machined. This makes great demands on the grinding tools required.

As a fundamental principle, there is a discernible trend towards higher requirements of the edge quality. Whereas a few years ago, grit sizes of D76 and coarser were used, currently grit sizes of D54 and finer are state of the art. In addition, a specialisation on individual types of inserts has occurred within the industry.
The universal grinding wheel is a thing of the past. Increasing cost pressure has resulted in a growing need for optimisation. The different requirements of individual insert types mean that individual solutions are needed.

Information
Further information on applications and products can be found at www.nortonabrasives.com

TRENDS IN THE MACHINING OF INSERTS

The current Norton WINTER grinding wheel programme for the machining of inserts offers solutions for all application areas in this industry sector. Customised to the respective grinding task and the system environment, the innovative diamond grinding wheels from Norton WINTER offer the ideal solutions under both oil and emulsion cooling.

REQUIREMENTS OF DIFFERENT INSERTS

NORTON WINTER	STANDARD TUNGSTEN CARBIDE INSERTS	LARGE TUNGSTEN CARBIDE INSERTS	POLISHED TUNGSTEN CARBIDE INSERTS	CERMET INSERTS	CERAMIC INSERTS
LOW WHEEL WEAR	●			●	●
HIGH FEED RATES	●	●		●	
COOL GRINDING BEHAVIOUR		●	●	●	
OPTIMAL EDGE QUALITIES			●		●

Inserts are produced in very large quantities: Every year, almost a billion inserts are produced around the world. Time savings of just a few seconds per insert can thus mean great increases in capacity. For this reason, more rigid, efficient and increasingly automated machines with shorter axis paths and faster control systems are being developed. In order to be able to meet these growing possibilities, the development of fast grinding, innovative grinding wheel systems continues apace in the insert production area.
In the development of materials, the requirements are also increasing. As a basic principle, the inserts must be harder than the material to be machined. Accordingly, the grinding tools also need to be optimised. In addition to the commercial aspects, the trend towards miniaturisation is becoming increasingly important in the insert industry. Although the requirements regarding cutting edge qualities are growing, e.g. in aluminium machining, the inserts are becoming increasingly smaller. This requires increased usage of fine-grit diamond grinding wheels during the peripheral and top and bottom grinding of inserts.

DEVELOPMENT TREND IN THE PERIPHERAL GRINDING OF INSERTS

*] Large carbide inserts: Standard resin bonds up to D91

DRESSING RECOMMENDATIONS:

The success of the grinding process does not depend solely on the selection of the right grinding wheel. Grinding wheels are increasingly being adapted more closely to the respective requirements. Thus, the right conditioning and subsequently the selection of the best dressing tool are growing substantially in importance.
SAINT-GOBAIN Abrasives uses its decades of experience in this regard as a system supplier and provides customised dressing and grinding wheels in line with the job requirements

DIAMOND GRINDING WHEELS
FOR TOP AND BOTTOM GRINDING OF INSERTS

With the Level⁺ series for the top and bottom grinding of inserts, Norton WINTER is setting new standards with regard to evenness and precision.
The Norton WINTER Level⁺ products, grinding wheel systems that have been specially developed for this application, are characterised by very free-grinding behaviour.
The grinding pressure can be significantly reduced and therefore long dressing intervals become possible.
The unique grinding characteristics of this product family also permit substantially higher feed rates so that impressive increases in productivity can be achieved.

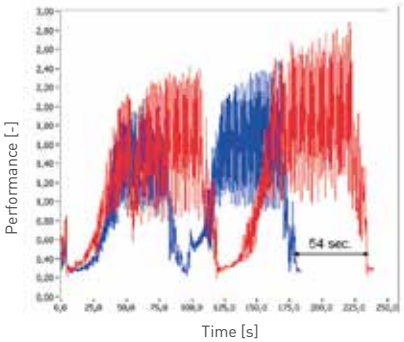
TOP AND BOTTOM GRINDING

STANDARD DIMENSIONS FOR TOP AND BOTTOM GRINDING OF INSERTS

WORKPIECE	MATERIAL	MACHINE	CUP GRINDING WHEELS		COOLANT
			SHAPE	BOND	
Inserts Plane knives etc.	Tungsten carbide Ceramic	Diskus Viotto Wendt ...	6A2 Ø 300...500 W 40...190 X 3...8	Norton WINTER LEVEL⁺	Emulsion Oil

OTHER DIMENSIONS ON REQUEST

WORKPIECE	Tungsten carbide insert
GRINDING TOOL	Level⁺ 219
GRINDING MACHINE	Viotto
COOLANT	Emulsion
GRINDING PARAMETERS	
FEED RATE	v_f = 25 mm/min
SPEED (TOP)	n = 900 min^{-1}
SPEED (BOTTOM)	n = 350 min^{-1}
ALLOWANCE / SIDE	a_e = 0.15 mm
DRESSING INTERVAL	15 inserts
CYCLE TIME	t = 88 s



RED = Competition
BLUE = Level⁺
The illustration shows the time savings compared to the competition, based on two ground workpieces.

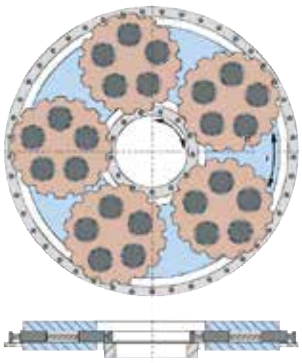
BENEFITS

- 20% higher feed rate
- 25% savings in grinding time
- 33% longer dressing interval
- More constant grinding characteristics
- Lower power consumptio

TOP AND BOTTOM GRINDING WITH PLANETARY KINEMATICS

The Level⁺ GPK (Grinding with Planetary Kinematics) grinding wheel is a variant from the Level⁺ family, developed for top and bottom grinding with planetary kinematics.

The Level⁺ GPK is characterised by very free-grinding behaviour, which means that short grinding times, high material removal rates and high outputs are possible. In addition to the commercial benefits, this specification also has very constant grinding behaviour with tight dimensional tolerances and excellent surface qualities and workpiece evenness.



STANDARD DIMENSIONS FOR TOP AND BOTTOM GRINDING WITH PLANETARY KINEMATICS

WORKPIECE	MATERIAL	MACHINE	CUP GRINDING WHEELS		COOLANT
			SHAPE	BOND	
Inserts Plane knives etc.	Tungsten carbide	AMT Melchiorre Peter Wolters Stähli ...	6A2 Ø 500...1020 W 40...190	Norton WINTER LEVEL⁺ GPK	Oil Emulsion

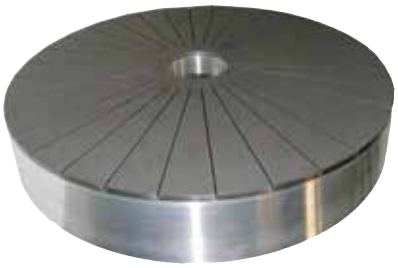
GRINDING MACHINE	Peter Wolters AC 700
COOLANT	Emulsion
GRINDING PARAMETERS	
WORKPIECES / LOAD	204 inserts
ALLOWANCE / SIDE	a_e = 0.25 mm
CYCLE TIME	t = 180 s



BENEFITS

- Dimensional tolerance - 5 µm
- Surface quality (R_a) 0.25 - µm
- Flatness - 1 µm

INSERT+

DIAMOND GRINDING WHEELS
FOR PERIPHERAL GRINDING OF INSERTS

The Norton WINTER INSERT+ family consists of specially developed grinding wheels for every type of insert. The programme includes in particular free-grinding specifications, with which e.g. in the area of standard inserts superb material removal rates can be achieved, as well as very robust, low-wear systems for the area of special inserts (ceramic, cBN...). For polished inserts, fine-grit variants are included in the portfolio, where an impressive combination of best cutting edge quality and high material removal rate is achieved. Let yourself be convinced by the performance of our systems!

NORTON WINTER INSERT+

Can be used for the grinding of

- Tungsten carbide
- Cermet
- cBN
- Ceramic

...under emulsion and oil
Chipping < 10 µm

Picture: In this example, the time benefit generated by Norton WINTER INSERT+ is 30 seconds per insert!

GRINDING PARAMETERS	
FEED RATE (SIDES)	v_f = 18 mm/min
CUTTING SPEED	v_c = 18 m/s
ALLOWANCE / SIDE	a_e = 0.4 mm
DRESSING INTERVAL	10 insert
CYCLE TIME	t = 97 s

BENEFITS

- 20% higher lifetime
- 10% seconds time savings per insert
- More than 15% cost reduction per insert

DIAMOND GRINDING WHEELS
FOR PROFILE GRINDING OF INSERTS

The profiling of inserts is a multi-faceted process. Various contours are generated, from simple flutes to complex profiles on the periphery of the inserts. Therefore, the applied profile wheels (e.g. 1E1, 1F1 or 1V1) are made from metal or resin bonds. With multi-process profiles (e.g. grooves for positive locking of the inserts in rotary holders), crushable metal or vitrified bond systems are frequently used.

APPLICATION EXAMPLE MULTI-PROFILE WHEEL

NORTON SAINT-GOBAIN WINTER

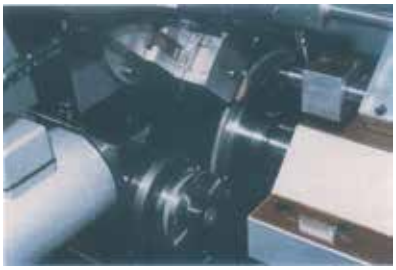
WORKPIECE	Tungsten carbide insert with 120° tapered flute (4fold flute width 2.5 mm)
GRINDING WHEEL	14A1-125-5-10 20 D64 Q-Flute
COOLANT	Emulsion
GRINDING PARAMETERS	
PROFILE DEPTH	0.7 mm
INFEED	a_e = 0.7 mm
CUTTING SPEED	v_c = 28 m/s
FEED RATE	v_f = 260 mm/min
SPECIFIC MATERIAL REMOVAL RATE	Q'_w = 3 mm³/mm · s

BENEFITS
- 47% time savings

APPLICATION EXAMPLE PROFILE WHEEL

NORTON SAINT-GOBAIN WINTER

WORKPIECE	Tungsten carbide insert with pre-sintered threaded profile
GRINDING WHEEL	MC1A1-150-4.5-5 D64 DMC C75
COOLANT	Emulsion
GRINDING PARAMETERS	
PROFILE DEPTH	0.95 mm
RESIDUAL ALLOWANCE	0.6 mm
INFEED	a_e = 0.6 mm
CUTTING SPEED	v^c = 23 m/s
FEED RATE	v_f = 150 mm/min
SPECIFIC MATERIAL REMOVAL RATE	Q'_w = 1.5 mm³/mm · s



BENEFITS
- 80% cost savings

DMC CONDITIONS OF USE

The crushing device should be part of the original machine; at least it should be strongly mounted onto the machine. By doing so, the advantages of profiling, without annoying tool changing, can be utilised. Pre-forming of the layer to the required profile is also possible.

Crushing can be carried out either with a powered grinding wheel, which drives the profiling roller, or with a powered profiling roller driving the grinding wheel. (If attention is not paid to this point, the wear of the profile roller will increase).

Profile crushing should always be performed using flood coolant, as the grinding wheel and the crushing roll must be lubricated. Additionally, during crushing, the abrasive layer must be cleaned with a Norton WINTER stone No. 2 or No. 5. This reduces profile distortion that may occur due to adherent wheel particles.

GRINDING TOOLS FOR PCD & PCBN MACHINING

GRINDING OF PCD AND PCBN INSERTS	**79**
Innovative vitrified bond PCX	80
High-performance grinding of solid PCBN inserts	81
Standard tools for manual PCD machining	82

PCD / PCBN

Diamond is the hardest known material and is used as MCD (monocrystalline diamond) and PCD (polycrystalline diamond) in the tools industry in a multitude of ways. The machining of diamond is not only difficult due to its hardness. Diamond is very brittle and therefore needs very free-cutting grinding wheels to generate good cutting edge qualities.

In addition to diamond, polycrystalline boron nitride (PCBN) cutting tools are increasingly being used in the industry; cBN is the second hardest known material and offers enormous lifetime benefits in comparison with tungsten carbide tools when turning and milling hardened steel, cast iron and sintered metals.

Information
Further information on applications and products can be found at
www.nortonabrasives.com

GRINDING OF PCD AND PCBN INSERTS

The machining of superhard materials such as PCD and PCBN places particularly great demands on grinding tools. There are hardly any differences in hardness between the workpiece and the diamond grain used in the grinding wheel, meaning that wear-resistant but free-grinding systems are required. Depending on the application, metal, vitrified, hybrid or resin bonds are used. Some standard specifications are available ex stock. With regard to your specific application, please simply ask us.

SELECTION ASSISTANT FOR NORTON WINTER BOND SYSTEMS

DIAMOND GRINDING WHEELS	WEAR RESISTANCE	RECOMMENDATION FOR USE
VFK		Metal bond for rough pre-grinding
VF		Metal bond for pre-grinding
VFF		Metal bond universal for pre- and finish grinding
VP		Metal bond for polish grinding
VPP		Metal bond for finest polish grinding
INSERT+CBN		Hybrid bond for solid PCBN inserts
PCX2050J		More wear resistant vitrified bond for profile tools, also for MCD
PCX2350H		Universal vitrified bond, also for high carbide proportions
PCX4350H		Most free grinding vitrified bond for large contact areas, small grit sizes

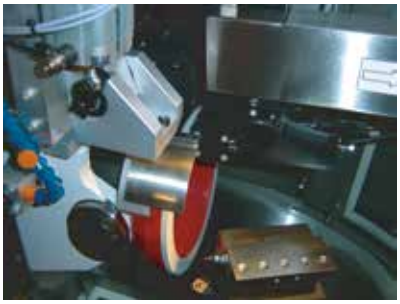
Other dimensions on request

INNOVATIVE VITRIFIED BOND PCX

Norton WINTER PCX raises the bar for machining hard materials like PCD and PCBN (especially very brittle grades with low cBN percentages <80% cBN). More and more often, very fine grit sizes are preferred to meet the increasing demand on cutting edge quality. Due to the freegrinding behaviour of the new PCX range, coarser grit sizes achieve the same edge quality as formerly used grinding wheels with finer grits. PCX allows high feed rates and reduced recondition intervals and thus combines perfect cutting edge qualities with improved productivity.



APPLICATION EXAMPLE 1

PCX

GRINDING TOOL	D15A PCX2350H C120A
GRINDING MACHINE	EWAG EASYGRIND
COOLANT	Emulsion
WORKPIECE	PCD milling insert (brazed, high carbide proportion)
GRINDING PARAMETERS	
FEED RATE	v_f = 2 mm/min
STOCK	a_e = 0.3 mm
CUTTING SPEED	v_c = 11 m/s

BENEFITS

- 45% time savings
- Very good edge quality
- Perfect surface quality on carbide backing

APPLICATION EXAMPLE 2

HIGH-PERFORMANCE GRINDING OF SOLID PCBN INSERTS

The grindability of the manifold PCBN grades differs considerably because of the large variety of combinations of cBN content, cBN grit size and binder.
The features required for individual application areas are determined by the stipulated variables. For e. g. milling operations with interupted cut, hard and tough PCBN grades with high cBN content are necessary. These inserts mostly consist of solid PCBN - a challenge for their grinding tools: excellent freegrinding behaviour and fast cutting features prevent the insert as well as the grinding wheel surface from being glazed.

Hybrid bonded tools proved to be the ideal solution for these fields of application. Norton WINTER INSERT+CBN has been developed especially for grinding solid PCBN inserts and has meanwhile become established. The very good freegrinding behaviour of Insert+CBN grants an enormous productivity increase within tight dimension tolerance and outstanding cutting edge quality.

APPLICATION EXAMPLE 1

INSERT

GRINDING TOOL	D46 INSERT+CBN C100 A
GRINDING MACHINE	WENDT WAC 725
COOLANT	Emulsion
WORKPIECE	solid PCBN insert
GRINDING PARAMETERS	
FEED RATE	v_f = 8 mm/min (sides), v_f = 20 mm/min (radii)
STOCK	a_e = 0.25 mm
CUTTING SPEED	v_c = 20 m/s
DRESSING INTERVAL	continuously

BENEFITS

- 30% reduction of wheel wear
- 10% time saving
- 16% grinding cost reduction

APPLICATION EXAMPLE 2

INSERT

GRINDING TOOL	D46 INSERT+CBN C100 A

STOCK	a_e = 0.2 mm
CUTTING SPEED	v_c = 20 m/s
DRESSING INTERVAL	1 x per workpiece

BENEFITS

- Outstanding grinding behaviour
- Enormous reduction of grinding time
- Considerable increase of lifetime in comparison to reference tool

STANDARD TOOLS FOR MANUAL PCD MACHINING

Apart from modern vitrified and hybrid bonds, metal bonded PCD grinding tools are still popular. These multi-purpose tools feature impressive lifetime, and are insensitive to variations in grinding pressure - which is important for manual applications. The selection assistant at the beginning of this chapter will help you to choose the best bond for your grinding task.

KNIVES

GRINDING TOOLS FOR KNIFE MACHINING

DIAMOND AND CBN GRINDING WHEELS FOR SURFACE AND PROFILE GRINDING **85**

Grinding of flat and circular knives 86

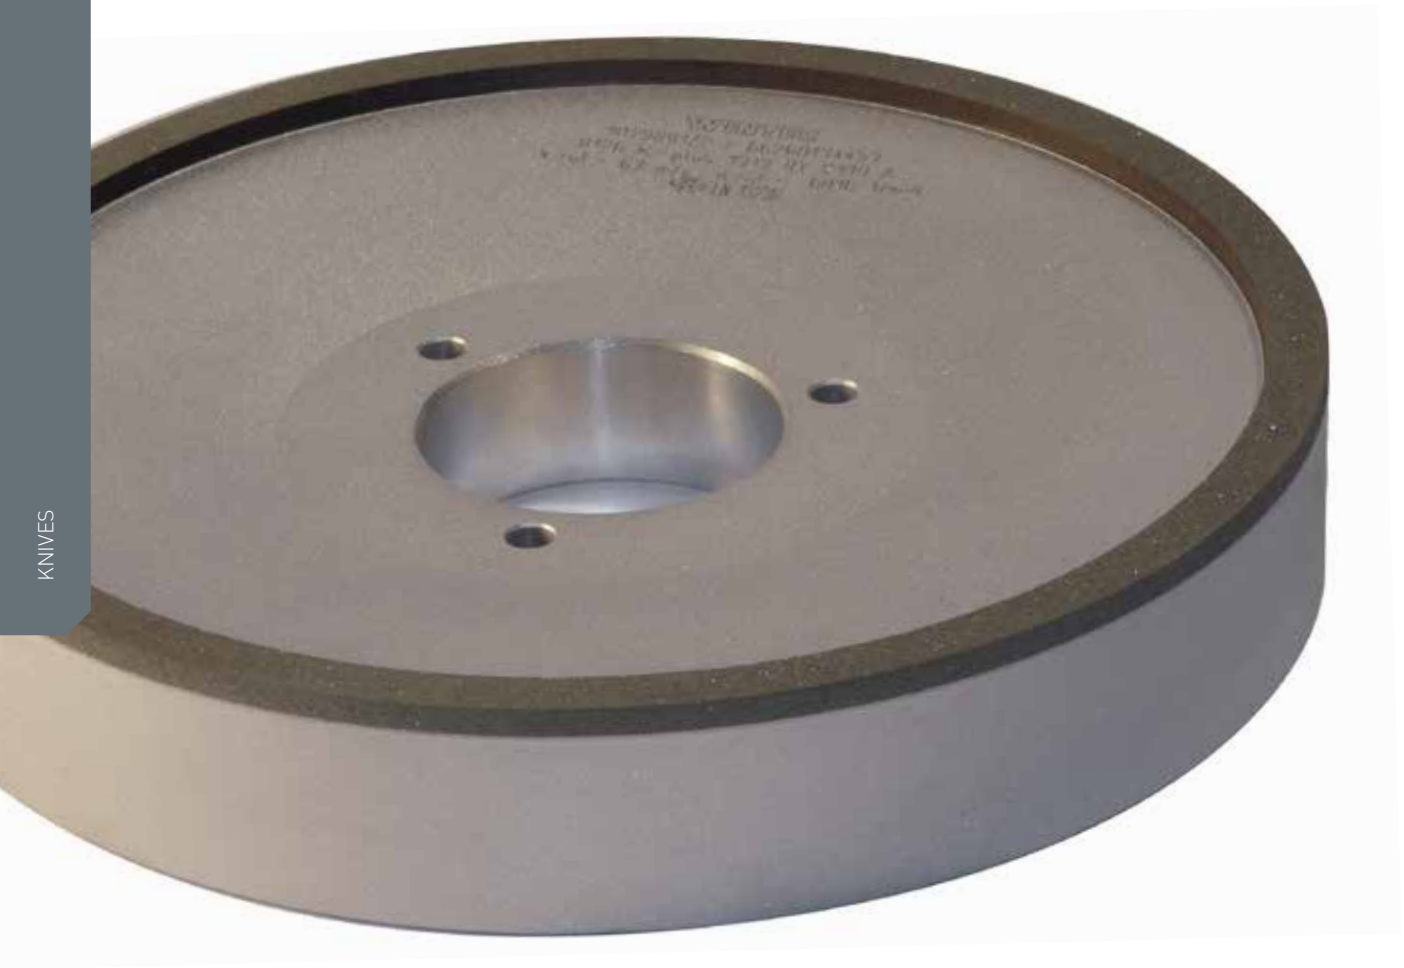
Grinding of profile knives 87

KNIVES

The knife industry includes various grinding applications in the manufacture of industrial knives such as flat, circular or profile knives.

The sharpness of the blade is the quality criterion for every type of knife. That is why most importance is given to the grinding of the blade facets. At the same time, this is also the most frequent application for superabrasive grinding tools in knife machining.

Information
Further information on applications and products can be found at
www.nortonabrasives.com



DIAMOND & CBN GRINDING WHEELS
FOR SURFACE AND PROFILE GRINDING

Norton WINTER offers metal and resin bonded grinding wheels for polish grinding of paper knives as well as roughly ground chopping knives for the recycling and shreddingsector

Both cup wheels for the grinding of flat and circular knives as well as peripheral wheels for the profiling of e.g. profile knives are available ex stock.

SELECTION ASSISTANT FOR NORTON WINTER BOND SYSTEMS

DIAMOND GRINDING WHEELS	WEAR RESISTANCE	RECOMMENDATION FOR USE
BZ587	↑	Standard metal bond for knife machining

Grinding of hobs 94

MILLING CUTTERS

In the woodworking industry, milling cutters are used for a variety of machining tasks. In this sector, there is a very wide range of milling cutters.
The most common are groove, joint, rebating, chamfering and profile cutters.
There are one-piece milling cutters as well as screwed and welded designs.
All of these tools place different demands on the grinding process.

Another major application area is hob grinding. Hobs are used in gear manufacturing and need to be ground and re-sharpened precisely with super-abrasive grinding wheels.

Information
Further information on applications and products can be found at
www.nortonabrasives.com

DIAMOND AND CBN GRINDING WHEELS OR GRINDING OF CUTTING FACES & CLEARANCES

The grinding of milling tools represents the last machining step in the manufacture and re-working of milling cutters. In a similar way to round tools and saw blades, the tool faces and the clearances (top) are the main applications for grinding. The machining of the top is particularly important here, as the runout of the milling tools is ensured in this manufacturing step. This then forms the basis for an even cutting performance.

SELECTION ASSISTANT FOR NORTON WINTER BOND SYSTEMS

DIAMOND GRINDING WHEELS	WEAR RESISTANCE	RECOMMENDATION FOR USE
K+1421R		Standard resin bond for CNC applications
K+1414N		Resin bond for tungsten carbide-steel combination grinding, dry

MOULD AND DIE INDUSTRY

In the mould and die industry small lot sizes are the order of the day.
More often than not, products are manufactured on a ‘one-off’ basis according to exact customer specification; this requires flexible and efficient solutions.

Many companies use a high proportion of manual production steps. CNC operations and automated production lines are unusual, due to small lot sizes.

Information
Further information on applications and products can be found at
www.nortonabrasives.com

DIAMOND AND CBN GRINDING WHEELS
FOR SURFACE AND OD GRINDING

Vitrified and resin bonded diamond and cBN grinding wheels are used for surface and OD grinding.

The Norton WINTER MAXI stock programme offers a substantial choice of resin bonded 1A1 standard grinding wheels for machining tungsten carbide and steel. Vitrified bonded tools are also specified for individual machining tasks. Please contact us regarding your requirements.

DIAMOND AND CBN GRINDING TOOLS FOR ID GRINDING

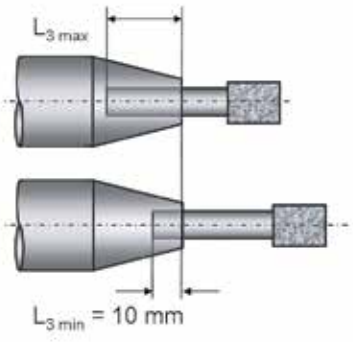
Many different materials are machined by ID grinding. The bond type of the grinding pin must be chosen according to the material.

VITRIFIED BONDS:
High resistance to wear and temperature, dressable, especially suited for hardened steels

RESIN BONDS:
Universally suitable for dry and wet grinding, especially for tungsten carbide and HSS

SINTERED METAL BONDS:
Extremely wear resistant with stable edge holding; well suited for short-chipping materials such as glass and ceramics

ELECTROPLATED METAL BONDS:
Single layer, high removal rates, surface roughness depending on grit size and condition of wear, especially suited for roughing tungsten carbide, glass and HSS



When choosing your grinding pin, please note that the diameter of the ID grinding tool should be no more than 70% of your bore. This keeps the contact area between the grinding pin and the workpiece in a comfortable range and avoids burning.
When in use, grinding pins are particularly prone to bending stress which can lead to tool failure if a particular threshold value is exceeded. For this reason, the permitted speed n_{perm} of a grinding pin must not be exceeded.
It is printed on the packaging label and is often engraved on the shaft of the grinding pin. The permitted speed shown there applies to a minimum clamping length of $L_{3\,min}$ = 10 mm.
Increasing the clamping length $L_{3\,min}$ will result in a new permitted speed. The ratio of increased clamping length and increase of permitted speed is not proportional but requires a recalculation of the new maximum of speed.
It is imperative to observe the permitted speed at all costs.
If the permitted speed is smaller than the adjustable speed of the grinding spindle, a different technical solution is required. If you have further questions, please contact us, we are pleased to help.

VITRIFIED BONDED GRINDING TOOLS

Grinding pins and grinding wheels with vitrified bonds are used in wet grinding. Over and above the tried and tested Norton WINTER VSS cBN vitrified bond systems, the N7 bond range which is well-known for OD grinding, has recently produced outstanding ID grinding results.
Due to their high porosity, these innovative glass-ceramic systems permit cool grinding and a long tool life at the same time.
They are also available now as mini grinding tools with 'N7 bore'.

GRINDING PINS / GRINDING WHEELS – SUMMARY AND RECOMMENDATIONS FOR USE

BOND TYPE	VITRIFIED BOND
Abrasive	**cBN (diamond on request)**
Bond designation	**Vitrified**
Features	Extremely high grit retention; protection against abrasion; very good profiling characteristics, highly porous, thus good transport for the cooling lubricant into and chip removal from the contact zone
Application areas	Predominantly hardened chrome steels, HSS and tool steels
RECOMMENDED USE	
Grinding wheel shape	**1A1W grinding pins and 1A8 grinding wheels**
Grit size d_k	B15 - B126
Bond	**"N7 Bore" (glass ceramic system); VSS (cBN ceramic)**
Circumferential speed v_c	40–80 m/s, please observe n_{perm}
Table feed rate v_f	0.1...2 m/min
Workpiece speed n_w	100...1000 min^{-1}
Infeed a_e	0.002...0.020 mm
Coolant	Oil and emulsion

RESIN BONDED GRINDING TOOLS

Resin bonded grinding pins and grinding wheels are used for dry and wet grinding and for manual and automatic grinding as this type of bond can easily be adapted to the required application parameters. As a result of extensive research and development, the characteristics of phenolic or polyimide resins have led to standard bonds which are used in over 50% of all manufactured grinding tools, including both diamond and cBN tools.

GRINDING PINS / GRINDING WHEELS – SUMMARY AND RECOMMENDATIONS FOR USE

BOND TYPE	RESIN BOND	
Abrasive	DIAMOND	CBN
Bond designation	**K+888RY** for grinding pins **1A1W** **K+888RY** for grinding wheels **1A1**	**KSSRY** for grinding pins **1A1W** **KSSRY** for grinding wheels **1A1**
Features	Consistently good material removal rate, good service life, cool and soft grinding behaviour, roughness depth according to grit size and conditions of use. Wet and dry grinding	Consistently good material removal rate, good service life, cool and soft grinding behaviour, roughness depth according to grit size and conditions of use. Wet and dry grinding
Application areas	Tungsten carbide For carbide-tipped saw blades, drawing dies and other mould and die manufacturing. On ID and coordinate grinding machines.	HSS and hardened chrome steels: Case-hardened steels with bore diameters up to 20 mm. On ID and coordinate grinding machines.
RECOMMENDED USE		
Shape (Order Number)	**1A1W grinding pins and 1A1 grinding wheels**	**1A1W grinding pins and 1A1 grinding wheels**
Grit size d_k	D7 - D15C - D46 - D64 - D76 - D91 - D126	B91 - B126 - B151
Bonds	**K+ and KS Bonds**	**KSS Bonds**
Concentration	C50 to C150	V120 to V240
Circumferential speed v_c	15...25 m/s wet Please observe n_{perm} 10...20 m/s dry	...30 m/s wet Please observe n_{perm} ...20 m/s dry
Table feed rate v_f	0.5...5 m/min	0.5...5 m/min
Workpiece speed rate n_w	100...1000 min^{-1}	100...1000 min^{-1}
Feed rate s (= $v_f \cdot 10^3 : n_w$)	1 to 5 mm	1 to 5 mm
Infeed a_e	2...5% of d_k	2...5% of d_k
Coolant	Oil and emulsion	Oil and emulsion

SELECTION ASSISTANT FOR NORTON WINTER BOND SYSTEMS

DIAMOND GRINDING WHEELS	WEAR RESISTANCE	RECOMMENDATION FOR USE
KS449		More wear-resistant resin bond preferably wet grinding
K+920		More wear-resistant resin bond preferably also dry grinding
K+921		More wear-resistant resin bond preferably wet grinding
K+888TY		Universal resin bond for wet grinding
K+888RY		Universal resin bond for wet grinding
K+1410		Free-grinding resin bond for dry grinding
K+777R		Universal resin bond for fine grit applications

CBN GRINDING WHEELS	WEAR RESISTANCE	RECOMMENDATION FOR USE
KSSRY		Universal resin bond for wet grinding
KSS10N		Universal resin bond for tool grinding

METAL BONDED GRINDING TOOLS

Metal bonded grinding pins are distinguished by a high level of profile retention and shock resistance. In addition, they conduct heat away fast, which is of particular benefit especially when sensitive materials are being machined.

GRINDING PINS / GRINDING WHEELS – SUMMARY AND RECOMMENDATIONS FOR USE

BOND TYPE	SINTERED METAL BOND
Abrasive	**Diamond (cBN on request)**
Bond designation	**BZ351** for grinding pins 1A1W
Features	Long service life, good material removal rate, great edge stability, surface roughness according to grit size and conditions of use. Suitable for wet and dry grinding, preferred for wet grinding.
Application areas	Tungsten carbide, hard short-chip materials (e.g. oxide ceramics), flat and hollow glass. On internal cylindrical and coordinate grinding machines. On high-speed manual machines.
RECOMMENDED USE	
Shape (Order number)	**1A1W grinding pins**
Grit size d_k	D64 - D91 - D126 - D151
Bond	**BZ351**
Concentration	C100
Circumferential speed v_c	15...20 m/s wet Please observe n_{perm} 12...18 m/s dry
Table feed rate v_f	0.5...5 m/min
Workpiece speed rate n_w	30...400 min^{-1}
Feed rate s (= $v_f \cdot 10^3 : n_w$)	1 to 10 mm
Infeed a_e	2 to 5% of d_k
Coolant	Emulsion Spray mist or compressed air

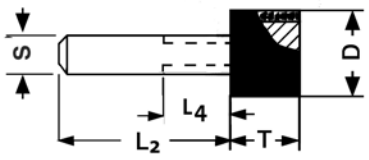
ELECTROPLATED GRINDING PINS

Electroplated grinding pins have three distinct advantages. Various special profiles can be manufactured to customer specifications and small head diameters from 0.4 mm are producible. Furthermore, distinct grain protrusion of diamond and cBN grits ensure high material removal rates. Apart from the extensive stock programme, various profile pins are available at short notice (see profile examples below). Please include the dimensions for D, T, S, S1, R, V and L_2, when ordering. For spherical pin, the head length 'T' should be specified as '0'. The front face of the head of electroplated grinding pins from 6 mm diameter and above is specially designed to reduce the contact area.
Minimum order quantity for manufacture of non-stock items: 5 pieces per item.



GRINDING PINS / GRINDING WHEELS - SUMMARY AND RECOMMENDATIONS FOR USE

BOND TYPE	ELECTROPLATED SINGLE-LAYER METAL BOND	
Abrasive	DIAMOND	CBN
Bond designation	**Norton WINTER S** for grinding pins **1A1W** and grinding wheels **1A1**	**Norton WINTER GSS** for grinding pins **1A1W** and grinding wheels **1A1**
Features	High material removal rate, surface roughness according to grit size and wear level, special shapes possible. Dry and wet grinding	High material removal rate, uniform surface roughness after an initial running-in period, special shapes possible. Dry and wet grinding
Application areas	Carbide, hard short-chip materials (e.g. ceramic oxide), pre-sintered carbide. On ID and coordinate grinding machines.	HSS and high-alloyed hardened steel. On ID and coordinate grinding machines.
RECOMMENDED USE

SMALL GRINDING TOOLS
FOR COORDINATE GRINDING

Apart from the range of 1A1W grinding pins, Norton WINTER is also offering a programme of small grinding tools with special geometries (07B grinding pin) and 11V2 grinding wheels for coordinate grinding. Specific standard solutions are available ex stock.

APPLICATION AREAS

Grinding die sockets and beverage can ironing rings for the packaging industry on coordinate grinding machines

SPECIFICATION	1K07B-12-5-2-6-40 *B126 KSS10N V240
WORKPIECE	HSS DM05, EW9Co10
HARDNESS	62 – 64 HRC
MACHINING PARAMETERS	
CUTTING SPEED	v_c = 30 m/s
FEED RATE	v_f = 80...100 mm/min
INFEED	a_e = 0.02 mm
COOLANT	Oil or emulsion (1 to 4%)

DIAMOND AND CBN CUT-OFF WHEELS

Diamond cutting wheels are used for efficient cutting of hard, short-chipping and wear resistant materials such as glass, ceramics and carbide. The current trend towards sintered materials has increased the use of diamond cutting wheels. They are successfully used in the food industry and medical science, due to their clean and almost residue-free cutting ability.
cBN was developed as an addition to diamond. The specific characteristics of this cutting material permit the machining of high-performance high-speed steel and hardened steel from 55 HRC as well as magnetic materials.
The cutting wheels consist of a steel core with the cutting layer on the periphery. The cutting layer in sintered metal, resin or electroplated metal bond contains either diamond or cBN. The combination of bond, type of abrasive, concentration and grit size leads to different tool characteristics which are specified to meet the requirements of different processes and applications.

EUROPEAN STANDARD EN 13236:2000 - COMMON MAXIMUM OPERATING SPEEDS FOR CUT-OFF WHEELS

CORE		ABRASIVE SECTION	APPLICATION MODE	GRINDING MODE	MAXIMUM OPERATING SPEED IN M/S ACCORDING TO BOND TYPE		
					Resin B	Metal M	Electroplated G
Metal	metal blank, e.g. cast, rolled, forged	closed	mechanically and manually guided cut-off grinding	wet cut-off grinding	63	80	80
				dry cut-off grinding	-	80	80
		segmented	mechanically and manually guided cut-off grinding	wet cut-off grinding	-	40 [a]	50 [a]
					-	80	80
				dry cut-off grinding	-	63	80
		closed or segmented	manually guided cut-off grinding	wet and dry cut-off grinding	-	63 [b]	80
	sintered	closed	mechanically and manually guided cut-off grinding	wet cut-off grinding	63	63	-
Resin		closed	mechanically and manually guided cut-off grinding	wet and dry cut-off grinding		-	-

[a] For difficult to machine materials, like e.g. granite, diorite, quartzite, armoured concrete
[b] The abrasive section must be welded or sintered to the core for cut-off wheels for free hand cutting with metal bond abrasive sections

APPLICATION NOTES

1. WHICH MATERIALS CAN BE CUT?

As a general rule, diamond cutting wheels are used to cut hard, short-chipping materials such as glass, ceramics (fired and unfired), carbide, graphite, quartz, ferrite and semiconductor materials.

Materials with an affinity for carbon, such as iron-based alloys, are cut using cubic boron nitride (cBN). High-alloy steels such as HSS and chrome steel with 12% Cr are typical examples. Ideally, steel should have a minimum hardness of 55 HRC. Soft, long-chipping materials accumulate in the chip space, so they tend to clog. Compromises can be achieved with electroplated bonds.

2. WHICH CUTTING LAYER SPECIFICATION?

The following is indispensable for correct selection of layer specification:

- full description of workpiece material
- cutting edge quality requirements (e.g. maximum size of edge chipping) machining parameters, range of variants (e.g. speed from/to, feed rate from/to)
- details of drive power (see point 4)
- details of coolants

3. WHICH TOOL DIMENSIONS?

The tool dimensions are determined by the machine and the height of workpiece to be cut. Normally, the flange diameter should not fall below 1/3 of the cutting wheel diameter, i.e. the maximum workpiece height which can be sawn is less than one third of the blade diameter.

A stable cutting wheel core is essential for chip-free cutting edges. The directional stability of the blade can also be enhanced by increasing the flange diameter (diameter size required). Proportionately larger flanges are advisable for high cutting rates. A summary of the internationally approved designations for continuous-rim cutting wheels and the associated flanges has been compiled by FEPA.

4. WHICH MACHINE?

Generally valid principles apply to the highest possible dynamic stability, since any oscillation during the cutting operation can have a negative effect on tool behaviour. Peripheral speed plays an important role in the adaptation of the tool to the cutting operation, and should therefore be adjustable, at least by means of a change of drive pulley.

Sufficient motor drive output is essential as an undersized motor will prevent the optimum utilization of the diamond tool. Diamond and bond must be made to work hard if the self-sharpening effect is to occur. Bonds will have greater resistance to wear and will thus be more economical if the spindle drive permits high cutting rates. Cutting wheels with diameters exceeding 300 mm should be used with a drive power of at least 1.5 kW; for ganged wheels, a further 0.5 kW should be allowed for each additional cutting wheel.

5. WHICH OPERATION PARAMETERS?

In the vast majority of cases, the full material thickness is cut in a single pass at a suitably chosen feed rate. However, step cutting rather than full cutting is used for particularly dense materials such as sapphire which wears the diamond layer without simultaneously removing a corresponding amount of the bond. The smaller the ratio of depth of cut to feed rate i.e. the shallower the cut, the greater is the sharpening effect of the cutting process. Feed rate is directly dependent on the spindle drive power and the hardness or toughness of the material to be cut. A general specification of cutting rates cannot be given in view of the large number of different materials which can be cut with the different cutting wheel types. There are optimal ranges of peripheral speed, dependent on the cutting operation. In general, low peripheral speeds (20–30 m/s) are used for dense, fine-debris materials, whereas higher speeds (30–40 m/s) are used for porous, coarse-debris materials.

6. COOLANT OR DRY CUT?

Metal bonded cutting wheels are invariably used with coolant (with the exception of the electroplated S-type), resin bond closed-rim blades can also work dry. Different coolants are used for the different workpiece materials, e.g. water, mineral based oils, emulsions, synthetic oils etc. It is important for coolant flow to be sufficient and to be accurately directed to the tool/workpiece interface. The coolant is supplied via coolant nozzles, by a special flange or by emersion.

RESIN BONDED CUT-OFF WHEELS

Resin bonded cutting wheels feature exceptionally good free-cutting characteristics due to low cutting forces and low cutting temperatures. The result is fast cutting with clean cut surfaces without edge chipping – which is particularly important for thinwalled hollow workpieces.

METAL BONDED CUT-OFF WHEELS

These bronze bonds. developed specially for saw blades, are wear resistant and relatively insensitive to shock. They feature considerably longer life than resin bonds, yet give much greater cutting forces, higer cutting temperatures and shorter cutting times.

DIAMOND FILES

Norton WINTER diamond files are mostly used in tool and die making for finishing form tools, die-cutting tools, drawing dies, and embossing dies. Their particular features are ease of handling, edge stability and long service life. They are available in four different grit sizes:

D181 for rough filing
D126 for universal use
D91 for finish filing
D20B and D46 for special applications
Other specifications on request.

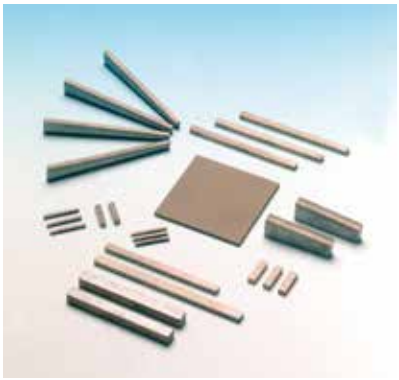
HONING STICKS

Honing is classified as machining with undefined cutting edges using a tool where grits are bound together whilst maintaining continuous surface contact between workpiece and tool for improving size, form and surface.
A periodic alteration of relative movements takes place between tool and workpiece, producing surfaces with parallel, criss-crossing grooves. In some cases a particular surface finish is required, for example to prevent the rupture of the lubricating film on cylinder liners. The advantages of diamond and CBN honing stones compared to conventional honing stones are

- Longer service life
- Better form stability
- Closer tolerances
- Cooler working, meaning no changes in the surface structure caused by thermal effects
- Less distortion



Diamond is exclusively used for honing workpieces, of all types of iron castings (cast iron, annealed cast iron and some cast steels).
Cylinder liners for internal combustion engines are typical examples.
cBN is primarily used for honing steel, e.g. machining steel, ball bearing steel, tool steel and alloy steel in all hardness conditions.

To achieve the required surface quality, it is important to correctly specify all process parameters: The right grit type (diamond or cBN), grit size, grit quality, the bond and the concentration must be selected according to the workpiece material and the workpiece hardness. Furthermore, the required surface quality and material removal rate will determine whether the process should be carried out in one step or several operations.

METAL BONDED HONING STICKS

	Item designation BZ08B	With diamond-free zone	Layer thickness X ≥ 1 layer width B ≥ 2 diamond-free zone S ≥ 0.5 layer length L ≤ 150
	Item designation BZ08D	Without underlayer	Layer thickness X ≥ 1 layer width B ≥ 2 layer length L ≤ 150
	Item designation BZ08E	Including strip mount	Layer thickness X ≥ 1 layer width B ≥ 2 layer length L ≤ 150 Tolerance at angle ß L_3 ≤ 12.5: ± 15° L_3 > 12.5: ± 10°

08B and 08D can only be used in conjunction with a strip mount.
08E is designed inclusive of strip mount for direct fitting.

APPLICATION DATA FOR REGRINDING METAL BONDED HONING TOOLS

The honing head should be ground to the diameter of the bore to be honed, in order to achieve the shortest possible running-in time after installation, i.e. soldering or gluing the stones to the honing shoes and fixing them to the honing spindle, so that a high percentage contact area is created right from the beginning.

SiC grinding wheel – resin bonded, e.g. Ø 200 mm, dry cut (uni-directional at point of contact)
Grinding speed (diamond /cBN) v_c = 15 m/s
Grinding speed (SiC) v_c = 23 m/s

Honing ratio G [cm^3/cm^3]	4.500	3.300	1.200	650

WORKING DATA AND GRIT SIZES

HONING SPEED

The cutting speed (v_c) is based on the speed at the circumference of the honing tool (V_A) and its stroke speed (V_H).

SUGGESTED VALUES	MEDIAN PRACTICAL VALUES
v_c = 30-70 m/min	52 m/min
v_A = 20-60 m/min	49 m/min
v_H = 10-30 m/min	16 m/min

INTERSECTION ANGLE

The ratio of stroke speed (v_H) and speed at the circumference (V_A) gives the characteristic angle of intersection (α) of the honing pattern. Usually the two speeds are selected so that the intersection angle lies between 25° and 60°, with a median value in practice of 36°.

CONTACT PRESSURE RANGE

20–200 N/cm² (exceptions up to 600 N/cm²)

COOLANT

In honing, mineral oil-based honing oils and water-soluble emulsions are used. Typical fluid use is 30–150 l/min per bore.

GRIT SIZES

The abrasive grit sizes specified for this process are classified according to FEPA standards, starting with B46 / D46. It is possible to manufacture tools different from those shown in the programmes. Please do not hesitate to contact us if you require assistance. Customers' own tools can also be coated. With regard to the determination of the nominal size, the undersizes which depend on the coating must be specified based on the grit size. Grit size tables can be found in the Service section of this catalogue.

ACHIEVABLE SURFACE FINISH VALUES WHEN HONING WITH METAL BOND HONING TOOLS|

The practical values listed in the adjoining diagram serve as a quick reference. Accurate surface finish values always depend on the bond, grit size and concentration of the honing tool as well as the workpiece material, coolant and the process parameters. It is especially important to maintain a balanced ratio between grit size and concentration in order to prevent excessive levels of contact pressure. Concentration levels should be between C35 and C100 or V120 and V240 respectively, depending on grit size.

Surface finish value R_a [1] [µm]	R_z [1] [µm]	R_t [1] [µm]
1.6	10.9	12.8

NORTON WINTER DIAPLAST® & NORTON WINTER DIAPLAST® SUSPENSION

Apart from bonded abrasives, Norton WINTER also offers an unrivalled range of diamond pastes and suspensions. Norton WINTER Diaplast® and Norton WINTER Diaplast® suspension are the ideal lapping and polishing materials for lab and industrial application.

NORTON WINTER DIAPLAST® MEANS QUALITY:

- Fast removal from the workpiece, meaning economic machining times
- Relief and distortion-free samples
- Outstanding edge definition; optimum surface quality
- Economical in use in conjunction with Norton WINTER Diaplastol thinners

DIAMOND GRIT SIZE AND GRIT DISTRIBUTION

Norton WINTER has extensive know-how in the preparation of diamond grits and the manufacture of diamond tools and diamond preparations. Grit sizes D25 to D0.7 are micro grits which are not classified by sieving but by special techniques. Norton WINTER has developed in-house processes with high precision requirements, especially for this purpose. The classification of micron powders carried out by Norton WINTER has closer tolerances than those stipulated by DIN and FEPA.

Up-to-date measuring systems and selection procedures are used for inspection and selection of individual diamond lots according to size and shape, thus ensuring a consistent level of quality.

It is important not only to keep within the specified grit size tolerances but also to maintain the particle size distribution within these limits. Even slightly oversized particles could cause surface scratches, whereas an excessive quantity of fines is uneconomical.

APPLICATIONS AND PRODUCT SPECIFICATIONS

DIAMOND BOND SYSTEM AND SOLUBILITY

The special characteristics of the paste and liquid carriers developed by Norton WINTER guarantee uniform diamond distribution and thus constant concentration. This provides optimum distribution of the individual particles avoiding the formation of agglomerates.

The viscosity of Diaplast® suspension is carefully controlled to ensure that the suspended state of the diamond particles is maintained over a long period.

In conjunction with our thinner Norton WINTER Diaplastol, it is important that a thin cooling lubricant film is formed to support the material removal rate provided by the diamond particles. The carriers used by Norton WINTER have unlimited shelf life and a high degree of temperature stability.

Norton WINTER Diaplast® diamond compounds types SS, N, M, E and Norton WINTER Diaplast® suspension are supplied in alcohol/water and/or oil soluble form as standard. They are colourless, have unlimited shelf life and a high degree of temperature stability. All constituents are either biodegradable or do not pose a threat to the environment (special waste disposal procedures are required for larger quantities).
Diaplast® Type T is universally-soluble.

PLEASE NOTE:
For preparatory machining tasks, for example

- diamond cutting wheels (catalogue No. 3, flat and crystal glass)
- diamond grinding wheels (from this catalogue)

are used. Why not make the experience of a leading diamond and cBN tool manufacturer work for you? Norton WINTER is the right partner for lapping and polishing jobs in industry and the laboratory.

DIAMOND CONCENTRATION

The decisive parameters for material removal rate are number and size of the cutting edges of the diamond grit that engage the workpiece at any one time. The number of particles per unit of weight decreases with increasing grit size.

The diamond content increases with increasing grit size in Norton WINTER diamond compound types SS and N and Norton WINTER Diaplast® suspension. Diamond concentration is always the same for types T and E.

OVERVIEW OF NORTON WINTER DIAMOND PASTES

SS	For very fast material removal, extremely short machining times, top quality surface finish and geometric accuracy. Application on very hard material such as carbide and ceramics; materials with constituents of differing hardnesses; high-precision measuring and sensor surfaces.
N	For producing polished surfaces for metallographic, mineralogic and similar investigations. Applications on special steels, stainless steels.
T	The most economical paste for standard use in production. Application on large areas, in tool and die making as well as surface machining of rollers made of hardened steel, carbide, hard cast iron etc.
E	Economy paste for universal use. Machining of mass-produced parts and repairs and for when paste is frequently changed.

APPLICATIONS IN THE INDUSTRIAL FIELD:

- Aeronautics and astronautics
- Engine construction
- Hydraulics
- Plant manufacturing
- Tools Industry
- Automotive industry
- Engineering
- Manufacture of fittings
- Pump and mixer industry
- Turbine construction
- Electronics
- Glass and plastics
- Medical technology
- Rolling industry
- etc.

EXAMPLE APPLICATIONS

Typical examples of workpieces successfully lapped and polished with Norton WINTER-Diaplast® diamond paste and Norton WINTER-Diaplast® suspension

- Auditory ossical implants
- Die-cast molded pieces
- Ignition electrodes
- Measuring and sensor tools
- Plungers
- Sapphire windows
- Sliding-ring seals
- Slide rollers
- Wire and thread guides
- Ball bearings
- Drawing dies
- Implants (hip replacements)
- Molded parts
- Pump vanes
- Sealing gaskets
- Slideways
- Switch contacts/-balls
- Wire-drawing dies
- Dental implants
- Embossing punches
- Injection molds
- Pistons for pumps
- Rollers with smooth surfaces
- Sealing surfaces
- Slide bearings
- Valve tapers, balls and seatings
- etc

APPLICATION NOTES FOR THE PREPARATION OF SPECIMENS FOR MICROSCOPIC EXAMINATIONS

PRACTICAL EXECUTION

Specimen preparation starts with mounting of the workpiece if applicable. Depending on the state of the specimen, it is rough-ground with silicon carbide abrasive paper or with Norton WINTER diamond grinding wheels.
The specimen is then polished with Norton WINTER Diaplast® compound or Norton WINTER Diaplast® suspension.

SAMPLE MOUNTING

In most cases. the standard mounting media are plastics, which are processed either hot or cold. It is important that the mounting medium should bond to the specimen without any gaps, otherwise abrasive or polishing agents may be deposited between the specimen and the mount. The hardness of the mounting medium should be matched to the hardness of the specimen in order to avoid edge rounding.

GRINDING

The surface state of the specimens before polishing is critical for the economic efficiency of polishing with Norton WINTER Diaplast® and for the quality of the final polish. Proper rough grinding can greatly reduce polishing time, enabling economical application of Norton WINTER Diaplast® and giving good surface quality. It is important to ensure that any unevenness caused by sawing is completely removed by the grinding operation.

POLISHING

Polishing with Norton WINTER Diaplast® diamond compound or Norton WINTER Diaplast® suspension can be effected on both manual and automatic polishing machines. A separate polishing disc with polishing cloth must be used for every diamond grit size. Norton WINTER polishing cloths can be used on commercial standard machines. Before starting polishing, slightly moisten the polishing cloth and distribute the polishing agent evenly on the polishing cloth. There are some cases where Norton WINTER diamond suspensions are easier to handle than diamond compounds, as diamond distribution on the polishing cloth is more even. Diamond suspensions are preferable for automated polishing operations as feeding during the process is possible. Norton WINTER Diaplast® diamond compound is soon saturated with the swarf of the material being machined, so that a little Norton WINTER Diaplastol thinner must be applied in order to maintain the cutting action of the diamond grit. A thin cooling and lubricating film must be maintained.

The polishing pressure to be applied is dependent on the specimen material and the diamond grit size. As a rule, high polishing pressure can be used with hard materials, and lower pressure should be used for finer diamond grits.

The selection of the grit sizes to be used depends mainly on the hardness of the specimens and their individual structural constituents. The greater the hardness of the material to be polished the coarser the grit to be used at the beginning. The finest grit sizes (D0.25 to D1) are generally not used with very hard materials. Remember that the polishing process not only removes the scratch marks of the last grinding operation, but it may be required to remove sufficient material from the specimen surface to expose an undamaged microstructure. This means it is often necessary to start with a larger diamond grit size than would be necessary for removal of the scratch marks from the last grinding operation.

NOTE

When polishing with Norton WINTER Diaplast® it is important to avoid any transfer of coarser grit to the next finer polishing operation. It is essential not only to keep the polishing device clean, but also to clean the specimens between the individual polishing stages. This may be done under running water with the aid of a brush (for coarser grit sizes) or with a cotton pad (for finer grit sizes). It is also recommended to use an ultrasonic cleaning bath between each polishing step.

POLISHING RECOMMENDATIONS

MATERIAL	SPECIMEN PRE-MACHINING	Norton WINTER DIAPLAST® AS PASTE OR SUSPENSION	POLISHING UNDERLAY	NOTES
Carbides Stellite	Diamond wheel/ foil D126 or D91.	D15 D7 D3 D1*	1007 1007 31 31*	* Polishing stage may in some cases be dispensed with
Ferritic Pearlitic Martensitic Austenitic steels Cast Iron of all types	Wet grinding on diamond foil D46 and/or SiC paper to 600 grit	D15* D7 D3** D1 D0.25***	1007 1007 or 31 31** 31 Soft cloth***	* Only for hardened steel ** Can in some cases be dispensed with ***Not required In hard castings and martensitic steels. Intermediate etching with 1% alcohol. HNO_3 before Diaplast® D1 is advanta- geous
Aluminium and aluminium alloys	Wet grinding on diamond foil D46 and/or SiC paper to 1000 grit	D7 D3 D1 D0.25	1007 or 31 31 31 or cloth soft Soft cloth*	Use little pressure * Can in some cases be dispensed with
Lead alloys	Wet grinding on SiC paper to 1000 grit	D3 D1 D0.25	31 31 Soft cloth	Use little pressure Samples sensitive to water! Clean only with Alcohol Grinding lubricant: petroleum jelly
Copper and copper alloys	Wet grinding on diamond foil D46 and/or SiC paper to 1000 grit	D7 D3 D1 D0.25*	1007 or 31 31 31 Soft cloth*	* For ultra-pure copper or very soft copper alloys, machining with D0.25 can be dispensed with; instead, use alumina on a soft polishing cloth and give a brief second polish
Magnesium alloys	Wet grinding on SiC paper to 1000 grit	D7 D3 D1 D0.25	1007 or 31 31 31 Soft clotht	Clean samples with alcohol
Nickel and nickel alloys	Wet grinding on diamond foil D46 and/or SiC paper to 1000 grit	D15 D7 D3 D1 D0.25	1007 1007 or 31 31 31 Soft cloth	
Silicon and germanium	Wet grinding on diamond foil D46 and/or SiC paper to 1000 grit	D7 D3 D1 D0.25	1007 31 31 or cloth soft Soft cloth	
Zinc and zinc alloys	Wet grinding on SiC paper to 1000 grit	D7 D3 D1 D0.25	1007 or 31 31 31 Soft cloth	A brief second polish with alumina 3 on a soft cloth may be required. Rinse with methanol. Intermediate etching with 5% alcoh. HNO_3 before Diaplast® D1 recommended. Use little pressure

POLISHING RECOMMENDATIONS

MATERIAL	SPECIMEN PRE-MACHINING	Norton WINTER DIAPLAST® AS PASTE OR SUSPENSION	POLISHING UNDERLAY	NOTES
Ore samples (of various compositions)	Diamond wheel/foil D126 or D91 or wet grinding to 1000 grit	D15 D7 D3 D1*	1007 1007 31 31*	* Whether machining with Norton WINTER Diaplast D1 and D0.25 is necessary depends on the respective materia hardness. In samples with constituents of differing hardnesses this is normally necessary.
Ceramic samples	Diamond wheel D126 Diamond foil D64 or D46	D25 D15* D7 D3 D1 D0.25**	1007 1007* 1007 31 31 Soft cloth**	* Dispensed with in samples with constituents whose hardness differences are only slight. ** Is only necessary in samples also containing softer constituents
Carbon	Saw-cut	D7 D3 D1 D0.25*	1007 31 31 Soft cloth*	* Is only necessary in soft types of carbon.

These recommendations have been compiled on the basis of our experience with common materials.
Due to the large variety of alloys and material compositions, optimal results may require slight deviations from the above table in some cases.

It is possible, in principle, to miss out individual grit sizes, but this mostly results in longer polishing times which may cause relief formation. Our metallographic laboratory is available for consultation in difficult cases.

MICRON POWDER

Norton WINTER micron powders consist of synthetic diamond, natural diamond and cBN with specific characteristics adapted to different industrial applications. The compounds are divided into the following types:

TYPE	HARD MATERIAL	COLOUR	SHAPE AND SURFACE	
Type M	Synthetic diamond	Greenish-yellow to pale yellow	Monocrystalline, predominantly blocky, distinct cutting edges, flat cleavage planes, defined structure.	Type R	Synthetic diamond	Greenish-grey	Monocrystalline, irregular, blocky, many cutting edges, fragile structure. This type of grit is also available with metal coating. Its designation is then RC.	Type P	Synthetic diamond	Black to dark grey	Polycrystalline, blocky shapes, many cutting surfaces, no platelets, no needle-shaped particles.	
Type N	Natural diamond	Colourless to pale grey	Monocrystalline, blocky to splintery, irregular, defined structure, many cutting edges.	
Type B	cBN	Black	Monocrystalline, blocky, distinct cutting edges This type of grit is also available with metal coating. Its designation is then BC.	
MICRON POWDERS WITH METAL COATING

For special applications, the use of metal-coated micron powders has proved to be advantageous, for instance in resin bond grinding wheels. Norton WINTER micron powders with metal coating are available in sizes 15–25 µm, 20–30 µm and 25–37 µm. Grit size relates to the size of grit excluding the metal coating.

QUALITY

Due to the high quality standards Norton WINTER imposes on classification, checking and packing under clean room conditions, a consistent level of grit quality is guaranteed.

MEASUREMENT OF GRIT SIZE

There is no universal procedure yet for determinati on of grit size. The method recommended by FEPA as 'Standard for Diamond Micron Powder Sizes' provides guidelines for grit size determination but they are not universally applied.

Norton WINTER uses optical image analysis for measuring grit size. This method permits the additional determination of the form factor (ratio of width to length of the measured particles) of the grit. The results are comparable with those obtained by FEPA.

Up-to-date methods for chemical purity checking such as energy dispersive analysis (EDA) and atomic absorption spectroscopy (AAS) are also applied.

LAPPING TOOLS

MANUAL LAPPING TOOLS

Norton WINTER manual lapping tools are used for sharpening, beveling and breaking off edges on tungsten-carbide tools directly on the machine. Resin bonded laps are used for finer cutting edges, i.e. for wood and metal mills or small cutting chisels. The metal bonded, more wear resistant laps are preferred for robust applications like larger cutting chisels or milling heads.

DRESSING TOOLS

ELECTROPLATED & SINTERED - METAL BONDED DRESSING TOOLS

For dressing vitrified and resin bonded diamond and cBN grinding wheels Norton WINTER offers you suitable dressing tools. Thus electro-plated and sinter-metal bonded dressing tools are always available ex stock. Further details will be found in our catalogue No. 5 'Dressing Tools'.

STOCK PROGRAMME

STATIONARY DRESSING TOOLS

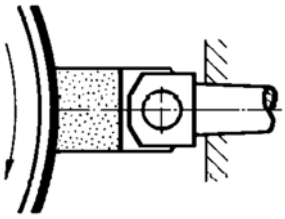
EXAMPLES OF STATIONARY DRESSERS

Please refer to our Catalogue No. 5 'Dressing Tools' for our comprehensive product range of stationary dressers

DIAMOND FLIESEN® TOOLS

Universal dressing tool for profiling and straight dressing.
Diamond Fliesen® are characterized by consistent behaviour throughout their service life.

SPECIFICATION	GRIT SIZE FLIESE®	DIMENSIONS		ORDER NUMBER
		DIAMOND SECTION	FLIESE®	
TFAS90-20-15-33 D711 T645-J3 E Furioso	D711/J3	20 × 15	20.5 × 33	60157693885 [1]
TFAS90-20-15-33 D711 T645 E	D711	20 × 15	20.5 × 33	69014185720 [2]

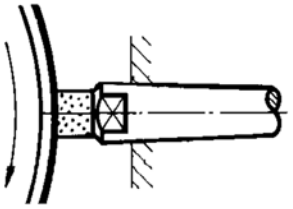


[1] For grinding wheels such as Quantum, Vortex (SG, TG, XG, ES, special corundum etc.), of grit size 80 - 120
[2] For grinding wheels made of fused alumina abrasives, grit size 80 - 120

IGEL® / PRO-DRESS®

A robust dressing tool for straight dressing of peripheral and plane surfaces.
Igel® are easy to handle and very economical in use. Their main advantage is higher dressing feed speeds.

SPECIFICATION	ct	DIMENSIONS		GRIT SIZE IGEL®	ORDER NUMBER
		DIAMOND SECTION	HOLDER		
HIG3.5-8-11-MK1-40 D711 H710	3.5	Ø 8 × 11	MK1 × 40	D711	66260195960 [3]



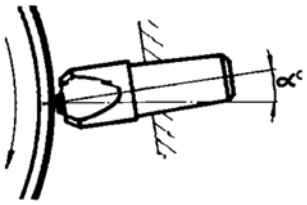
[3] For grinding wheels made of fused alumina abrasives, grit size 60 - 80

Pro-dress® is of similar design to Igel®. Its area of application is straight dressing peripheral and plane surfaces with fine and finest grinding wheel grit sizes.
The low cutting pressure makes this dressing tool ideally suited for OD grinding and surface grinding.

PROFILE DIAMOND TOOLS

Profile diamonds are tools which have to meet highest demands.
These tools are used in areas where highest profile accuracy is required.

SPECIFICATION	ct	DIMENSIONS				ORDER NUMBER
		α	R	LENGTH	DIAMETER	
40/250 L	0.33	40°	0.250	45.5	Ø 9.52	66260339381



SINGLE POINT DRESSING TOOLS

Single point dressing tools are suitable for straight grinding wheels and simple profiles. Depending on quality, the diamonds have several usable points which can be rotated. This is not possible for single-use diamonds with only one point.

TECHNICAL INFORMATION

Service 148
Glossary 150
Contact 158

The Norton WINTER brand represents over 160 years of heritage and grinding experience. Many companies worldwide involved in industrial production benefit from this expertise.

We know our customers' requirements and help you with our technological expertise and competence. This way, your grinding process becomes more effective and profitable.

SERVICE

Competition is keen, and cost pressures are acute. To improve productivity and technical capability, you need a supplier who co-operates efficiently. Norton WINTER not only provides high performance grinding tools but can also assist in analysing your processes, to identify the best solution, and then to implement it together with you.

ADVICE:

Our field service engineers and customer service team are here to help, and can offer advice on all Norton WINTER products and grinding processes. Together with product management and our application engineering team, customised solutions will be found which meet your needs.

PRODUCT DEVELOPMENT

Norton WINTER, as the grinding industry's technology leader, invests heavily in Research and Development. Basic research supports new customer-specific product and application developments at our global Technology Centres. Our EGTC (European Grinding Technology Centre) with the R&D Department in Norderstedt, closely co-operate with our Research and Technology Centres in the USA, France and China.

PROCESS OPTIMISATION

At our EGTC (European Grinding Technology Centre), we can evaluate your grinding processes using sophisticated sensing and measurement systems which you may not have access to. So we can demonstrate improvements to your process without interrupting your production. On your factory floor, our application and development engineers continue to support you. Our dedicated specialists are expert in the field of complex grinding systems, and can advise on new production strategies with the help of innovative process diagnostic technology. The result for customers is a fine-tuned production process, and optimised day-to-day operations. Technology Centre) with the R&D Department in Norderstedt, closely co-operate with our Research and Technology Centres in the USA, France and China.

TRAINING AND CONTINUING EDUCATION

We offer regular seminars on current issues and developments at our European Grinding Technology Centre (EGTC) in Norderstedt. Economic and advanced production processes are reviewed with top-class experts from different parts of the industry. We invite internal and external consultants on specific subjects to comment on the technological state-of-the-art and development trends.

Ask your field salesman for the latest calendar of scheduled seminars and get yourself registered. Specific training programmes can also be arranged according to your individual requirements. Just contact us - we will gladly make an offer that meets your needs.

NORTON WINTER OFFERS SEMINARS ON TOPICS SUCH AS:

- Tool Grinding Technology Forum (expert panel discussion)
- Grinding (basic training)
- Grinding fluids (focused technology review)
- Dressing technology (focused review)

FIELD INSTRUMENTATION SYSTEM (FIS)

OPTIMISE YOUR PRODUCTION PROCESS

Have us make a **FIS process analysis** and optimise your production process: field instrumentation system is a portable system to monitor and measure your grinding process. Exact and comparable data is obtained and can contribute to increase your performance:

- Process optimisation, reduction of cycle time
- Prolongation of tool life time
- Machine and process studies
- Analytical determination and benchmarking

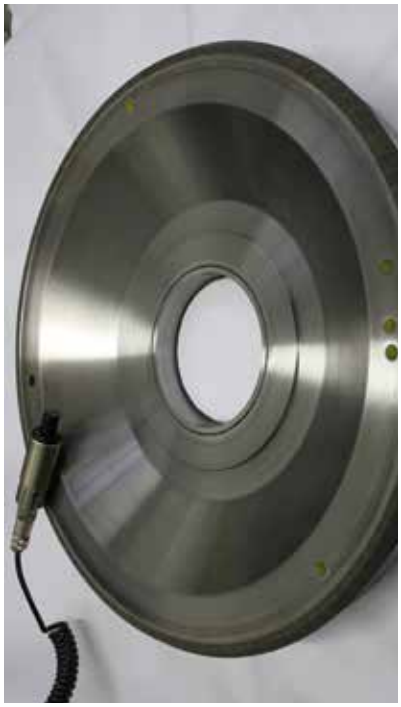
GIVE IT A TRY!

MDRESS - MOBILE DRESSING UNIT

FOR BETTER GRINDING RESULTS

Almost every CNC grinding machine can be upgraded by MDress, the mobile rotary diamond dressing unit. Using MDress ensures highly precise reconditioning of grinding wheel profiles. The grinding wheel achieves its ultimate axial and radial running truth directly on the main spindle. Our customers are enabled to test, for example, vitrified bonded grinding wheels, on the CNC grinding machine and obtain a more economic grinding result. Our application engineers will give you support, to demonstrate an optimised dressing process with the MDress dressing system on your machine at your premises.

JUST CONTACT US.



RFID – RADIO FREQUENCY IDENTIFICATION

This technology makes it possible to transfer stored data from the grinding wheel to the grinding machine. The advantages are

THE INCREASED LEVEL OF TRANSPARENCY

- Integrated tool-life monitoring
- Automated scanning and storage of tool use

SHORTER SET-UP TIMES

- Direct access to grinding wheel data by the machine control system
- Elimination of operator error in manual recording and entry of data

IMPROVED PROFITABILITY

- Reduced machine downtime by automatic data transfer between machine and grinding whee

GLOSSARY

For your reference: a short explanation of grinding terms

BONDS

To meet the challenges of the wide diversity of grinding applications, it is inevitable that a wide range of bond systems is required. Bonds are categorised according to the fundamental material type used, and many variations exist within each type.

RESIN BOND SYSTEMS

These are based on either phenolic or polyimide resins, usually together with added fillers, as well as the abrasive grains. Resin bonds are at the lower end of the hardness scale, and are used in a wide range of applications due to their fast and cool grinding behaviour.

SINTERED METAL BONDS

Most metal bonds are based on bronze, although harder systems may be based on steel or even hardmetal. Sintered bronze bonds are relatively soft and at their softest can overlap the hardest resin bonds. Steel and hardmetal bonds are more wear resistant, so therefore act harder and grip the abrasive grains more strongly, leading to longer tool life, although the abrasive can sometimes appear blunt.

Metal bonded grinding wheels generally grind more slowly, in most applications acting harder, and more grinding heat is developed than in resin bonded wheels. However, metal bonds can also readily dissipate heat, which also impacts the grinding process. Metal bonds are ideal for grinding wheels with sharp edge profiles, and for machining abrasive materials that would otherwise wear the bond. Furthermore, metal bonds are shock-resistant, and are suitable for very aggressive operating conditions. Metal bonds are mostly used in wet grinding. Special variants are crushable, brittle metal bonds that can be dressed on the machine in a special crushing process. These bonds are especially useful in creep feed grinding.

ELECTROPLATED BONDS

In this bond system, the metal bond is deposited electrolytically onto a bronze or steel body. The grit is tenaciously achored by the bond, and grain tips can protrude from the bond layer by 30 - 50% of the grain diameter. This leads to a grinding layer with a very high material-removal-rate capability. However, only the outermost grain layer acts in this way, which is why these tools are mainly designed in single-layer versions. Such single layer bond systems are suitable for profiled wheel bodies of all kinds; profile accuracy is dependent on the grit size specified.

VITRIFIED BONDS

Vitrified bonds are based on fusible glasses combined with fillers and the abrasive grains. While resin and metal bonds are generally fully dense, vitrified bonds are usually produced with a defined porosity, and are available in different hardness levels. This variation in porosity and hardness is analogous to the vitrified bonds of conventional grinding wheels. The main features of vitrified bonds are:

- Good dressability and profileability
- Free-cutting due to the porosity and self sharpening behaviour
- Fluid availability, due to porosity, in the grinding zone allows cool grinding at low grinding forces
- High cutting speeds and material removal rates are possible.

CONCENTRATION

According to the Norton WINTER system, the concentration value defines the volume fraction of diamond or cBN in the abrasive layer as follows:

DIAMOND		
Concentration	Carat / cm³	Volume %
C50	2.2	12.5
C75	3.3	18.75
C100	4.4	25
C125	5.5	31.25

cBN		
Concentration	Carat / cm³	Volume %
V120	2.09	12
V180	3.13	18
V240	4.18	24
V300	5.22	30

These definitions are not applicable for single layer electroplated tools.

CONDITIONING

Conditioning of a grinding wheel consists of dressing and cleaning:

DRESSING		CLEANING
PROFILING	SHARPENING	
Influences macrostructure	Influences microstructure	Influences microstructure
Produces concentricity and grinding wheel profile	Generates topography and grain exposure by eroding the bond	Removes chips from chip space
Need: Shape or re-shape the wheel surface	Need: Create grit protrusion	Need: No change in the surface

CUBIC BORON NITRIDE (CBN)

Boron nitride is found in two structural modifications: Cubic boron nitride (cBN) has the zinc-blende crystal structure equivalent to diamond, and has a hardness just a little below that of diamond. The graphite-like hexagonal modification of boron nitride (hBN) is soft and is used as a lubricant.

Compared to diamond, cBN has technological and economic advantages when grinding materials having a chemical affinity to carbon, such as steels and ferrous alloys. Applications for cBN are becoming increasingly economic, and cBN grinding of workpieces with hardness as low as 50 HRC have been demonstrated.

DIAMOND

Diamond is one of the three carbon modifications (the others are graphite and the fullerenes) and, with a Moh's hardness of 10, diamond is the hardest material known. The grinding (Rosiwal) hardness is 140 times higher than that of alumina. Because of its hardness and wear resistance, diamond is used for grinding hard, brittle and short-chipping materials. Examples are tungsten carbide, glass, ceramics, quarz, semiconductor materials, graphite and wear-resistant thermal spray alloys as well as hard-facing alloys, plastics with glass fiber reinforcement, and other difficult to machine materials. Both natural and synthetic diamonds are used in industrial applications.

- **NATURAL DIAMOND:**
  these diamonds were created in the earth's mantle under high pressure and temperature (1200 -1400°C). Both single crystals (octahedrons, triangles...) and crushed grit (boart) are used in industrial diamond tools.
- **SYNTHETIC DIAMOND:**
  synthetic diamond grits are formed in presses in a very high pressure/high temperature (HP/HT) process, at up to 60000 bar and 1500°C, using a variety of solvent/catalyst materials which help to convert graphite into diamond.
- **MCD:**
  large synthetic diamonds that are produced in a HP/HT process similar to synthetic diamond grit.
- **PCD**:
  polycrystalline diamond pieces formed by sintering micronized diamond particles together with a binder under HP/HT conditions.
- **CVD:**
  these diamonds are manufactured by gas phase deposition (methane, hydrogen) at low pressure using a vacuum system.

DIRECTION OF ROTATION INDICATOR

Resin and metal bond diamond and cBN grinding wheels always show an indicator for the direction of rotation. At the end of the production chain of a multilayer grinding wheel is the profiling and sharpening process. In the sharpening process, a bond tail is formed behind each of the active abrasive grains. This bond tail supports the grain and prevents the grain from untimely fracture. If the wheel is mounted the wrong way round, this bond tail would precede the grains during cutting, which would lead to lower chip-space, increased grinding pressure, and early grain fracture. Therefore, it is important to adhere to the rotational direction shown by the indication arrow or to re-sharpen the grinding wheel before use, if you chose to change the direction of rotation.

DRESSING = TRUING + SHARPENING

It is necessary to distuinguish between the key wheel preparation steps of truing, sharpening and cleaning of the grinding wheel surface.

Dressing describes the processes of truing and sharpening a grinding wheel. When grinding with conventional alumina or silicon carbide wheels, "dressing" is the combined process of truing and sharpening. However, for superabrasive grinding wheels containing either diamond or cBN abrasives in a resin or metal bond, after truing, a separate sharpening step is usually required to remove some of the bond material and expose the grains. In addition, the grinding wheel surface must be cleaned (Dressing + Cleaning = Reconditioning) periodically. The dressing interval depends upon the grinding process parameters being used, and the type of workpiece material being ground.

Grinding wheel truing generates the correct geometric shape, develops the necessary concentricity, and also removes any surface contamination. In so doing, worn blunted grains are either removed or resharpened, and fresh grains are exposed. To achieve optimum results, dressing tools, dressing parameters and dressing strategy must be finely tuned to the grinding wheel and grinding process. Therefore, different tools and methods are used, such as either alumina-based or SiC sharpending stones, SiC grinding wheels, the Norton WINTER brake-dressing device, CNC rotary dressers, diamond dressing sticks, rotary profile dressers, etc.

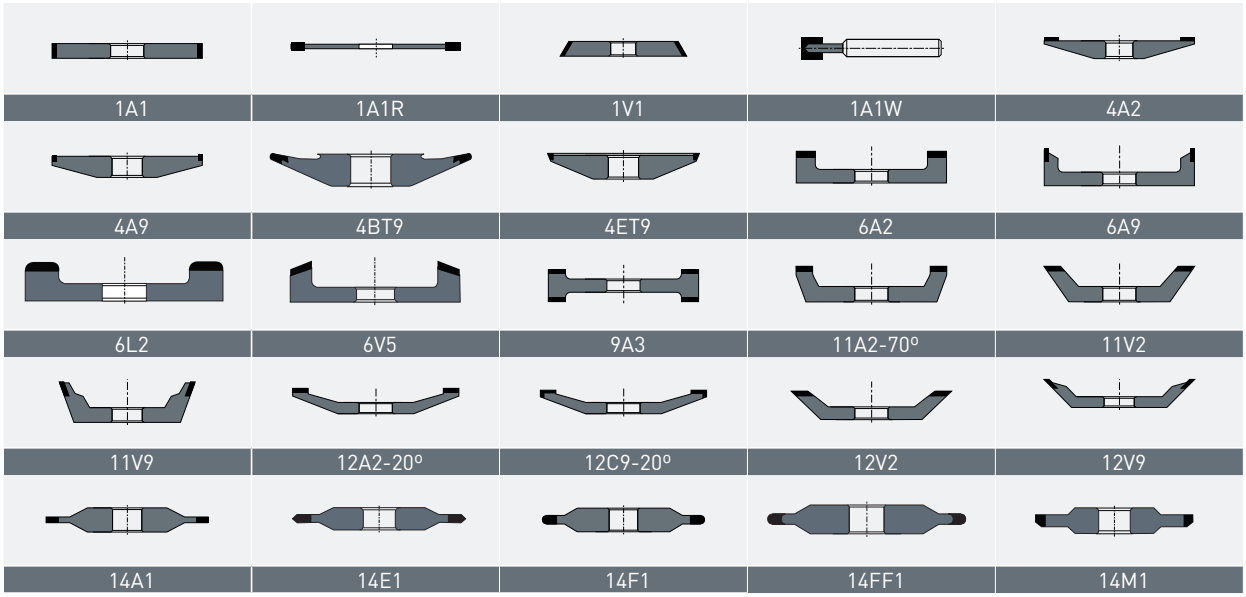
Our engineers can offer advice to help you chose the best method for your application.

FEPA

The Federation of European Producers of Abrasives (FEPA) is a non-profit European organisation which publishes safety guidelines and standards for conventional and superabrasive (diamond and cBN) grinding tools as well as loose abrasive grain (see grit sizes). It also provides standards for the most common grinding wheel shapes and dimensions.

FEPA-SHAPES

These drawings show the most important grinding wheel geometries:



GRINDING

According to DIN 8589, grinding is defined as material removal using geometrically undefined cutting edges. All grinding wheels with either diamond or cubic boron nitride (cBN) are grinding tools according DIN 8589. The "cutting edges" are composed of the diamond or cBN grit.

GRINDING RATIO (G-RATIO)

The grinding-ratio is calculated as a ratio of the ground workpiece volume V_w to the wheel wear volume V_s.

GRINDING WHEEL BODIES

The body of a grinding wheel provides the static and dynamic stiffness to the tool. Dependent on the kind of grinding layer, it may consist of aluminium, filled resin, brass, steel or ceramics. The body significantly influences the vibration behaviour and the thermal conductivity of the grinding wheel; the following table shows examples for superabrasive grinding wheel bodies.

BODY MATERIAL TYPE	LABEL	VIBRATION ABSORBTION	HEAT TRANSMISSION	MECHANICAL STIFFNESS
Resin with metal fillers	H	medium	sufficient	good
Resin with non-metallic fillers	B or D	good	bad	satisfactory (not sufficient with thinwalled bodies)
Aluminium	A	bad	good	very good
Steel	E	bad	satisfactory	very good
Copper	C	bad	very good	very good
Composite material	CFK	good	bad	good

GRIT SIZES

The seive-sizes for diamond and cBN range according to FEPA standards (also ISO 6106) and are shown in the following table. As abrasives always contain a range of grit sizes, the values given for average grit sizes and particles per carat are approximations. D-prefix indicates diamond, while B-prefix refers to cBN.

FEPA GRIT SIZE D OR B	STANDARD [Mesh]	AVERAGE GRIT SIZE [µm]	PARTICLES PER CT
1181	16/18	1100	60
1001	18/20	930	100
851	20/25	780	160
711	25/30	660	270
601	30/35	555	450
501	35/40	465	760
426	40/45	395	1200
356	45/50	330	2100
301	50/60	280	3500
251	60/70	233	6000
213	70/80	197	10000
181	80/100	167	16000
151	100/120	140	28000
126	120/140	118	46000
107	140/170	99	80000
91	170/200	83	135000
76	200/230	72	200000
64	230/270	63	300000
54	270/325	55	460000
46	325/400	47	750000
39	400/500	38	1400000
33	500/600	33	2100000

Norton WINTER has its own classification for fine and microgrit sizes. FEPA standards are similar (M 63...M1.0).

NORTON WINTER DIAMOND CLASSIFICATION	GRIT SIZE [µm]
D 25	40 - 60
D 20 C	34 - 45
D 20 B	25 - 37
D 20 A	20 - 30
D 15	8 - 25
D 15 C	15 - 25
D 15 B	10 - 20
D 15 A	8 - 15
D 10	6 - 10
D 7	5 - 10
D 5	3 - 7
D 3	2 - 5
D 1	0.5 - 2
D 0.7	0 - 1
D 0.25	0 - 0.5

HARDNESS OF ABRASIVES

The hardness value of a material is generally influenced by the method of measurement. Different measuring methods and equipment result in different scales and units which cannot easily be compared. Thus several scales exist, for example:

Moh's hardness: abrasion behaviour (measure of scratch resistance)
Rosiwal hardness: stock removal behaviour (measure of resistance to stock removal)
Vicker's Microhardness: indentation behaviour (resistance to penetration)

In the following table, different hardness values for abrasives are given and compared to some reference materials:

MATERIAL	MOH'S HARDNESS	ROSIWAL HARDNESS	VICKERS MICROHARDNESS (HV)
Diamond	10	140.000	10.000
cBN	9.9		9.000
Silicon carbide	9.6		2.600
Corundum	9	1.000	2.060
Quarz	7	120	1.120
Manganese	5	6.5	540
Gypsum	2	1.25	36
Talc	1	0.03	2.6

Diamond's stock removal resistance (Rosiwal hardness) is 140 times higher than corundum (alumina), even though its penetration hardness (Vickers) is only 5 times higher.

MATERIAL REMOVAL RATE

The material removal rate, MRR or Q_w, is expressed in mm^3/s and defines the volume of workpiece material ground per unit time (second).
The specific material removal rate, MRR' or Q'_w, refers to the removal rate per millimetre of wheel contact width and is expressed in units of [$mm^3/(s.\ mm)$].

PARAMETERS INFLUENCING GRINDING RESULTS

The table shows some correlations between process variables and the grinding results.

INFLUENCING PARAMTERS / APPRAISAL CRITERION		CUTTING FORCE F F = F(...)	GRINDING RATIO G G = F(...)	ROUGHNESS R_A R_A = F(...)	TEMPERATURE ϑ ϑ = F(...)
Machine- and Operation Paramters	Cutting Speed v_c (m/s)					Material Removal Rate Q_w (mm^3/s)					Coolant (Oil Content)				Grinding Wheel	Grit Size (µm)					Concentration ($Carat/cm^3$)				
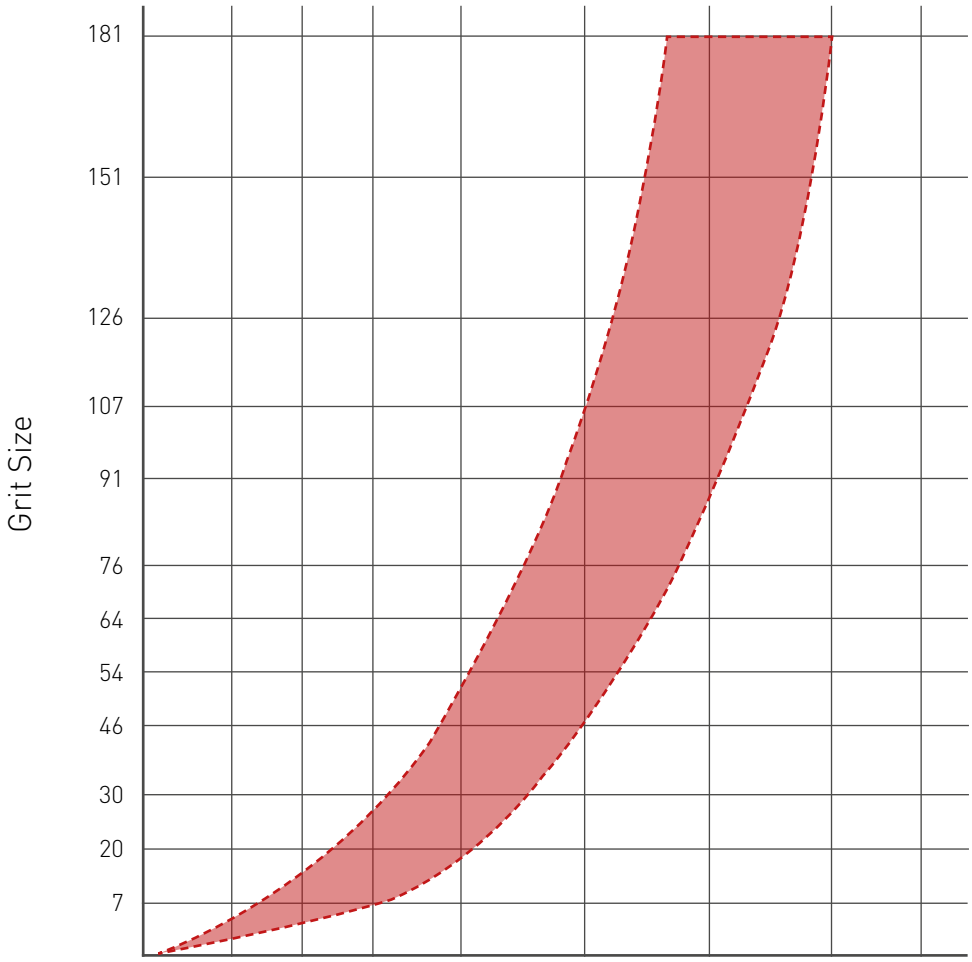
ROUGHNESS

The surface roughness of a ground workpiece is influenced by many diverse parameters:

- Grit size of abrasive grain
- Concentration of abrasive grain
- Specification of bond system
- Type and hardness of work piece
- Grinding process
- Grinding parameters
- Dressing parameters

A general and qualitative correlation between grit size and surface roughness is shown below:



R_a [µm]	0.012	0.025	0.05	0.1	0.2	0.4	0.8	1.6	3.2
R_t [µm]	0.100	0.200	0.40	1.0	1.6	2.5	6.3	10	20
R_z [µm]	0.050	0.100	0.20	0.6	1.0	1.6	3.8	6	15

SPECIFICATION

The specification is the general description of the grinding tool and contains all relevant information concerning the product's features. In general, the specification always contains the following details:

EXAMPLE:

11V9	100-2-10-20	D126	K+888R	C75	A
Shape	Dimension	Grit Size	Bond	Concentration	Body Material

Furthermore, the specification can contain additional information regarding drawing index, production method, structure, and other details.

SUPERABRASIVES

Diamond and cubic boron nitride are the hardest materials existing in industry today, according to the current state of knowledge. The levels of hardness of diamond and cBN are significantly higher than those of conventional abrasives like alumina (corundum) and silicon carbide (see hardness).

WEAR EFFECTS ON DIAMOND AND CBN

The hardness of an abrasive grit type alone is not sufficient to determine the grinding tool's grinding behaviour. Diamond and cBN grains can wear in many ways, causing different effects.

Primarily, there are two main types of wear.

MECHANICAL WEAR:

Abrasion, micro-chipping of cutting edges, grit macrofracture, and breakout of grain from the bond.

CHEMICAL AND THERMAL WEAR

Carbon diffusion, graphitization, oxidation, and reaction with grinding fluids.

Diamond not only reacts with iron (above a certain threshold temperature), but also with chromium, vanadium and tungsten. cBN does not show chemical reaction with iron or other metals.
Therefore, cBN has proven to give better tool performance when machining, for example, high speed steel, although it is not as hard as diamond.
An outward sign of the occurance of thermo-chemical wear is the rapid appearance of wear flats on the grains, when no grain chipping from mechanical wear is present.

CONTACT

Whom to ask first? Who is my nearest contact person?
Where can I get quick and easy help on grinding tools and grinding processes?

For your inquiries please ask you sales engineer:

Saint-Gobain Diamantwerkzeuge GmbH & Co. KG
Schützenwall 13-17
D-22844 Norderstedt
